FOREWORD

THE *rāga*-s of which notations appear in this book conform to the Benares Musical Tradition. They have been noted as played on the North Indian *Vīṇā* by the late Shivendranāth Basu of Benares and with his kind help and advice. They often differ slightly from those noted by Bhātkhande and other modern compilers who belong to other schools (gharana-s).

A D

PART I

INDIAN MUSICAL THEORY

“Extracting the essence of the Scriptures, I shall explain the origin of Intelligible Sound which is the only means of achieving the four aims of life—virtue, success, pleasure and liberation ” (*Sangita-darpana*, 1-29)

“The Man who understands the inner meaning of the sound of the harp, who knows intervals, modal scales and rhythms, shall travel without effort on the way to liberation ” (*Yājñavalkya Smṛiti*, III, 115)

CHAPTER I

THE HISTORY OF INDIAN MUSIC

"Animals tamed or wild, and children even, delight in musical sounds. Who can depict their beauty?" (Sangīta-darpana, 1-31.)

THERE are three main layers of civilization in India, an aboriginal culture speaking Munda languages, a Dravidian culture speaking Dravidian languages and probably representing the high culture the Aryans met with when they conquered North-Western India, and an Aryan culture speaking Sanskritic languages.

The history of music in India has remained linked with these different cultural backgrounds which have never achieved a real unity. We meet today aboriginal music among the Munda-speaking tribes, a Dravidian music in Southern India and a Northern Sanskritic musical tradition. Obviously there has been much exchange of theoretical data and considerable mutual as well as external influences. Yet the fact remains today that we find in India very distinct musical systems which correspond in the main to the linguistic and ethnic divisions of the country.

The fact that the theory of music came, even in Dravidian areas, to be in the hands of a Sanskritic Brahmanical class that looked to the Aryan *Veda*-s as the source of all knowledge led to considerable misconceptions as regards the origin and theory of non-Aryan music.

Yet this affected more the theory than the practice, and the music itself, whether it be art music or folklore, has maintained very definite characteristics.

There is evidence of early musical contacts between India and the Middle and Far East.

The ancient *Kinnari Vīṇā* (Vīṇā of the Kin-nara-s) or Kin seems to have been known in China as the Ch'in. It is a stringed instrument said to have been played by the first Emperor, Fu-Hsi (c. 3000 B.C.). The mythical Kin-nara-s, a word which

may mean "men of Kín", may have been originally the Chinese. The Ch'in is further mentioned in ancient Chinese chronicles, such as the *Chi Kí* (second century B C), in connection with events of the sixth or seventh century. According to the *Li Chi*, Confucius (551-578 B C) always had his Ch'in at his side when at home, and carried it with him when he went for a walk or on a journey.

In *Genesis* (iv, 21 and xxvi, 27) a stringed instrument of a similar kind is called Kinnor. David used to play the Kinnor as well as the Nebel (harp or lyre).

The antiquity of Indian theatrical art and musical theory was well known to the ancient world. According to Strabo (*Geography* x, 11, 17) the Greeks considered that music "from the triple point of view of melody, rhythm and instruments" came to them originally from Thrace and Asia. Further, "the poets, who make the whole of Asia, including India, the land or sacred territory of Dionysos, claim that the origin of music is almost entirely Asiatic. Thus, one of them, speaking of the lyre, will say the strings of the cithara of Asia resound."

Megasthenes (quoted by Arrian in his *Indika*, VII, 8, written in 150 B C) tells us that Dionysos "taught the Indians to worship the other Gods and himself by playing cymbals and drums, he also taught them the satyr dance which the Greeks call kordax."

"This is because they are, of all peoples, the greatest lovers of music and have practised dancing with great love since the days when Bacchus and his companions led their bacchanalia in the land of India" (Arrian *Anabasis of Alexander* VI, 3, 10).

Megasthenes had come to India in 302 B C. He reported that the Indians counted 153 kings and 6042 years between Dionysos and Alexander (who entered the Punjab in 329 B C). Similar information is also given by Pliny the Elder who, however, gives the number of years as 6451. By comparing these Greek dates with those of the dynasties given in the various *Purāna-s*, several attempts have been made to identify Dionysos with some early figure of Indian history (particularly Manu or Krishna). However, from the similarity of the legends and the symbols, there can be no doubt that Dionysos is Shiva and that the dates refer to his chief incarnation, as described in the

Shaiva Purāṇa-s, which give approximately the same dates.

Dionysos is the Greek name of a prehistoric divinity whom the Indians call Shiva (the auspicious). Shiva, represented as a nude and lustful god wandering through the primeval forest, is said to have been the first teacher of the oldest system of music and dancing in India. Up to a comparatively recent period this system seems to have remained distinct from that which traces its origin to the Vedic Aryans. A number of treatises on music, some of which are still extant, refer to the Shiva school of music which seems to be derived from a pre-Aryan civilization.

A fundamental characteristic of the Shiva school of music is the conception that basic modes must, for symbolic reasons, be pentatonic,¹ hence the classification of all heptatonic forms as variants of fundamental pentatonic modes.

The Vedic Aryans brought to India another conception of music, to which were added later important Iranian and Greek elements. This led to the development of a musical theory distinct from the Shivaite. The contrast in the basis of their parallel systems is still felt in the music of Northern India.

A general Sanskrit theory of music, termed *Gāndharva Veda*, was elaborated at a very early date. From such summaries as have survived, it seems that the *Gāndharva Veda* studied every use of musical sound, not only in different musical forms and systems but also in physics, medicine and magic.

The rise of Buddhism brought about a sharp deviation in the ancient approach to the arts and sciences. During this time the *Gāndharva Veda*, together with several of the other sacred sciences, disappeared. Fragments of some of its texts may still survive in unpublished manuscripts. A short account of the contents of the *Gāndharva Veda*, said to have been collected from such sources, has been published in an encyclopedic work in Hindi, *Hindutva*, by Motilal Gaud (Benares, 1928).

Musical theory and the theory of language in India were considered by the Sanskrit theorists as two parallel branches of one general science of sound. Both have often been codified

¹ Shivaite philosophy attaches great importance to the number 5 as a symbol of life.

by the same writers. The names of Vashishtha, Yajnavalkya, Nārada, Kashyapa, Pāṇini, are mentioned among the early musicologist-grammarians. Nandikeshvara is famous as the author of a work on the structure and content of language in its broader sense as well as of a treatise on music. His work on linguistics is believed to be anterior to the *Mahābhāṣya* of Patanjali (attributed to the second century B C) into which it is usually incorporated, though it is thought to be probably posterior to the grammarian Pāṇini, who seems to have lived not later than the sixth century B C.

The Four Schools (Mata-s)

In A D 1550, the late medieval author Rāmāmātya wrote "The science of music has both in theory and in practice degenerated into conflicting views" (*Svaramela-kālānidhi*, I, 24). This was not an accurate statement. The various forms of music found on the Indian continent did not come from a common source and the efforts made by theorists after the tenth century to explain all the musical facts in terms of a theory which was considered to be unique and of divine origin required a great deal of intricate musical exegesis. The earlier writers trace the origin of the musical system, which they describe, to one of four different teachers each representing a different musical tradition. Hence there are four distinct systems or *mata-s* known as expounded by Shiva (or Someshvara), Bharata, Hanumanta, and Kallinātha. These systems undoubtedly had a distinct origin and belong very probably to the different cultures that came together on the Indian continent and which have retained to our day distinct characteristics in spite of century-old attempts to relate them to one another.

The basic (shuddha) scale of Southern or Karnāṭaka music is and has always been fundamentally different from the basic scale of Northern or Hindusthani music. It cannot be said that these scales are formed from one another any more than the Dravidian languages are connected to the Indo-European ones.

There is also evidence in Bengal and Orissa of independent musical systems. In Assam, Nepal, and most Himalayan countries musical forms are found which belong to the Sino-

Tibetan family.

Many of the "low castes" and primitive tribes in India, often descendants of independent peoples with a civilization of their own, have kept to our day original musical forms that bear no relation to those defined in the *Nāṭya Shāstra* or the *Saṅgīta-ratnākara*. The case is particularly striking for the *Ahīr*-s (ancient Abhira-s) of Northern India. In many regions, particularly in a few valleys of the Himalayas, there remain archaic forms of music with an upper tonic and a descending scale, the study of which would be of great interest towards the understanding of some of the ancient texts.

Although the various schools of music in present-day India lay claim to the same ancient treatises, there remain such important differences in musical practice that the meaning of the texts has to be forced to a sometimes incredible extent, so that they may appear to refer to musical systems completely different from those they describe. Hardly any of the modes of Southern Indian music is identical with a Northern Indian mode, yet each one claims the same origin. Even in the North, *rāga*-s and styles differ from one province to the other.

It is a common belief in Southern India that Southern music represents the more ancient school while Northern music has evolved under external influences. Except in minor points, this opinion, however, does not appear to correspond with the facts. Both systems are extremely ancient. Southern Indian music was subjected to systematic reforms, one of the main reformers being Venkata Makhin in the seventeenth century. Northern Indian classical music, on the other hand, though it lent itself easily to temporary fashions, did not attempt to systematize *rāga*-s or styles. In many instances it seems to have remained the same in spite of temporary changes. It still conforms with the definitions in some of the most ancient books.

The stories that relate how the various styles of Northern Indian music were developed by musicians of the Mohammedan period seem usually unfounded. Under Moslem rule, age-old stories were retold as if they had happened at the court of Akbar, so as to make them acceptable to new rulers and win the praise and honours bestowed on the creative artists of the day. Such transfer of legends is frequent everywhere. We

should therefore not be surprised to find ancient musical forms and musical instruments being given Persian-sounding names and starting a new career as the innovations of the Moghul court

The assumption that the scales and styles now used by the "Ustads" of Northern India pertain to, or have been influenced by Turkish, Arab or Persian melody-types is unlikely. The structure of Arab and Persian music is quite different from that of Indian music. It is difficult to see how the one could have seriously influenced the other without losing its distinct character—unless one is referring merely to the setting of certain types of poetry, or to certain mannerisms or ways of sitting or of placing the voice.

The Turkish system was also known to late medieval Hindu scholars who occasionally mention Persian and Turkish music (the latter under the name of *Turushka*).

Amir Khusrau (A.D. 1253-1319), a Turkish musician and scholar at the Persian court of Delhi, wrote that Indian music was so difficult and so refined that no foreigner could totally master it, even after twenty years of practice.

The Sanskrit Writers on Music

The main Sanskrit treatises on music present, at first sight, a mass of conflicting definitions. However, a careful study of the divergences and similarities between various groups of texts shows that these belong to different schools and have been mixed without discrimination. The original works, based upon a coherent theory, are easy to classify. The rest represent more or less adapted compilations of which each element has to be dealt with separately. Unfortunately, only fragments of the earlier works are now available.

The Sanskrit writers on musical theory belong to four main periods. The first concerns authors mentioned in the *Purāṇa*-s (the "ancient scriptures") and in the Epics (*Mahābhārata* and *Rāmāyana*), the second, those mentioned in early medieval works. The third period concerns the authors who wrote between the medieval Hindu revival and the Moslem invasion. The last or modern period is that of Sanskrit writers under Moslem and European rule. Exact dates can usually be ascertained only for the authors of the two last periods.

Among the important landmarks of musical literature must be regarded the chapters on music of some of the *Purāṇa*-s, particularly the *Vishnu-dharmottara*, *Mārkaṇḍeya Purāṇa* and *Vāyu Purāṇa*. The Hindus regard these texts as extremely ancient. This seems to be confirmed by the technical terms used in reference to music. Puranic texts are, however, often difficult to interpret because of the lack of critical editions and of the abundance of copyists' errors in technical passages.¹

Many of the available works of the early period have been re-written over and over again. This is quite natural for they were teachers' text-books and not library records. Thus, to accept the date of their latest re-editing as the earliest date of compilation, as some over-cautious scholars have a tendency to do, may give an erroneous picture of musical history.

The available early works refer either to the *Gāndharva Veda* or to the Shaiva tradition as their authority. In these we find theories easier to understand. Taking into account the changes that have occurred in the scale, in the tonic, etc., the interpretation of the early works should present no difficult problem except that of restoring the corrupt portions of the text.

First Period (Puranic-Vedic-Epic)

An approximate chronology of the most important writers belonging to the early period may be established with the help of a few works that have partly survived, although any attempt to fix definite dates or periods can only be conjectural. References in Vedic, Puranic and Epic literature permit us to place most of the legendary authors of the early period in the pre-Buddhist age.

A chronological chart can be drawn showing the relative antiquity of authors mentioned or quoted in the works available in full or in fragments. Although far from being exhaustive, this chart shows the relationship between the most important Sanskrit writers on music of the early period, which must have extended over many centuries. Most of these early works are archaic in their language.

The main works of Nandikeshvara, the main Shivaite

¹ See Alain Daniélou, *Textes des Purāṇa-s sur la Théorie Musicale*, Institut Français d'Indologie, 1959.

author, on the philosophy of music are now believed to be lost but fragments of them are incorporated in later works

A small surviving part of an anonymous manuscript in the Bikaner Library, called the *Rudra-damarudbhava-sūtra-vivaraṇa* (published by Mādhava Krishna Sarma in the *New India Antiquary*, June, 1943).¹ explains the formation of musical sounds on the basis of the *Maheshvara Sūtra*-s, an esoteric arrangement of syllabic sounds, which Nandikeshvara also accepts as the philosophical basis of the Sanskrit language and, in fact, of all language. This text seems to be either a fragment of Nandikeshvara's work or a study directly based upon it. The first part of the manuscript is a fragment of another work, in no way connected with the second part. This first part deals with the qualities and defects of singers in verses also found in the *Saṅgīta-raśanākara* of Shārngadeva.

A part of Nandikeshvara's work on dancing, the *Abhinaya-darpana*, has been published (Calcutta, 1934, with English translation by Manomohan Ghosh). An earlier translation by Ananda K. Coomaraswamy appeared under the title *The Mirror of Gesture* (Harvard University Press, 1917).

Further fragments of Nandikeshvara's technical writings on dancing and music, the *Bharata-arnava* in particular, remain unpublished. Manuscripts are to be found in the Tanjore and Madras libraries.

The Different Nārada-s

There are three separate authors known by the name of Nārada. One, the author of the *Nāradiya Shikshā*, is probably the earliest writer on profane music, some of whose writings have survived. He is quoted by all subsequent writers of the early period, who in turn are quoted by later Nārada-s, the authors of the *Saṅgīta-makaranda* and the *Chatvāriṃśadhātā-rāga-nirūpanam*.

According to tradition, the *Nāradiya Shikshā* forms part of the later Vedic literature. Although some attempts have been made to date this work rather late, there is no concrete evidence to disprove the tradition. The fact that the *Nāradiya Shikshā* mentions the names of only a few of the earliest

¹ Translated by A. Daniélou, in the *Journal of the Madras Music Academy* 1951.

authorities on music who are also mentioned in the *Vashishtha* and *Yājñavalkya Shikshā*-s, seems to confirm it as an early work. If we were to consider the *Nāradiya Shikshā* as a late work, we should have to account for some other very early work of the same description forming the link between Vedic chant and profane music as mentioned by Yāshtika, Nārada II, Kohala, Matanga and practically all subsequent authors. There seems to be no sufficient reason to doubt the authenticity of the available *Nāradiya Shikshā*.

The *Panchama Samhitā* and *Nārada Samhitā* are probably the work of the second Nārada, the author of the *Sangīta-makaranda*.

The *Chatvārimshach'hata-rāga-nirūpanam* is a much later work.

The Bharata Problem

The main available work attributed to Bharata, the *Nāṭya Shāstra*, is a compilation which has been variously dated between the second century B.C. and the fourth century A.D. It mentions Kohala and Dattila but not Matanga, and probably contains fragments of the work of Nandikeshvara, Kohala etc., and the earlier Bharata. It may in fact be doubted whether a sage named Bharata ever wrote the *Nāṭya Shāstra*. The Bharata Vriddha (Bharata the Elder) mentioned by Shāradātanaya, as distinct from the author of the *Nāṭya Shāstra*, is probably the author of the *Gītālamkāra*, a much older treatise belonging to the Shaiva school and quoted in the Panchatantra, the book of fables, dated about 300 B.C. The word "bharata" designates a dance-actor.¹ It was a common name in the title of all the treatises on stage technique. Thus we hear of Ādi Bharata, Nandikeshvara Bharata, Arjuna Bharata, Matanga Bharata, Kohala Bharata, etc. *Bharata Nāṭya Shāstra* would then simply mean "the text-book of the dance-actor". It is, in fact, a practical compilation of authoritative works on the subject periodically brought up to date.

The *Nāṭya Shāstra*, therefore, cannot be taken as a sure basis to determine the chronology. We should not be surprised to find Bharata himself mentioning several later authors as his sons. They all, however, belong to an earlier period and

¹ Some Celtic scholars link the Celtic word "bard" to the Sanskrit Bharata.

must obviously precede the last revision of the *Nāṭya Shāstra*

According to tradition Bharata had four sons—Shāndilya, Vātsya, Kohala and Dattila

"I taught the perfect practice (of music) to my sons, Shāndilya, Vātsya, Kohala and Dattila" (*Nāṭya Shāstra*, 1-26)

"The family of Bharata-s will be made famous in the future by the Bharata-s—Kohala, and, after him, Vātsya, Shāndilya, Dattila" (*Nāṭya Shāstra*, 36, 70-71)

These obviously later additions only mean that these four authors are considered the direct heirs to the tradition of the earlier Bharata. Their work, therefore, has great authority

Matanga

It appears at first difficult to ascribe Matanga, the author of the *Bṛhaddeshī*, to a definite period. The text mentions a number of early authors, including Yāshtika and Bharata. It has also an extensive commentary which mentions further writers, including Nandikeshvara, Kohala and Dattila. Some medieval and later authors have considered this commentary as the work of Matanga himself. But this is unlikely since it mentions Kohala, who, in a passage reproduced by Kallinātha, quotes Matanga. The name and the story of the sage Matanga are mentioned in the *Rāmāyana* and the *Mahābhārata* and in several *Purāṇa*-s. This places him definitely in the early period.

The Three Chatura-s

A quotation by Tumburu is found in Kallinātha's commentary on the *Saṅgīta-ratnākara* (1, 3, 10-16). In the commentary on the 27th verse of Matanga's *Bṛhaddeshī*, however, the same quotation is attributed to Chatura. Chatura is a name given to Kallinātha himself and the *Bṛhaddeshī* commentary might be considered late enough to quote him. Simhabhūpāla—more than a century before Kallinātha—repeatedly quotes from the *Bṛhaddeshī* commentary which he seems to consider the work of Matanga himself. It would therefore appear that the title of Chatura (clever) was also given to the early writer Tumburu, the same name having been used later for Kallinātha and also for Dāmodara Mishra, the author of the *Saṅgīta-darpana*.

Mātrigupta and Rudrata

The Mātrigupta mentioned by Nārada (in the *Chatvārim-shach'hata-rāga-nirūpanam*, and as Mātragupta, in the *Sangita makaranda*) has sometimes been identified with the celebrated poet Mātrigupta of the seventh century. This is not absolutely impossible, although it is unlikely.

Similarly, the Rudrata mentioned by the author of the commentary on the *Brihaddeshī* and also by Abhinava Gupta (tenth century) has been said to be either the ninth-century author of the *Kāvyaālankāra*, or Rudra Bhatta, the author of the *Shringāratilaka*.

Such attributions should not be attempted without concrete evidence. Sanskrit literature on music extends over so vast a period that similarities of name are bound to occur. The difficulty is to distinguish between numerous authors of the same name. We know of at least ten Bhatta-s, authors of different works, six Soma-s or Someshvara-s, five Nārāyana-s, four Dāmodara-s, etc. Among the existent works we have two *Sangita-ratnākara*-s, three *Sangita-nārāyana*-s, four *Bharata Shāstra*-s, four *Rāga-mālā*-s, and so on. Hasty identifications are sure to lead to mistakes such as have already been made in the case of the different Dāmodara-s.

If the commentary on the *Brihaddeshī* is really the work of Matanga, the boundary of the Epic-Puranic period in the list given below must be placed before Gāndharva Rājā. The relative chronology is not otherwise altered.

An attempt at relative chronology based on the mention of earlier authors in existing texts begins on the next page.

THE FIRST PERIOD

The first period extends from prehistoric ages to the *Purāna-Mahābhārata* period ¹

lāksha, Shatānanda, Sanvartta, Sthūlashurā, Sthūlāksha, Susharmā, Bhārgava

Then come Yāshtika+, Anjaneya+, Ashvattara, Kambala, Mārkaṇdeya+ (*Purāna*²), Vāyu+ (*Purāna*²)

BHARATA+

All the above names are mentioned in the *Nāṭya Shāstra*.
Later come Tandu and

MATANGA+

* * * *

II

Parallel to the *Gāndharva Veda* runs the Śruva tradition of which the main teachers are

¹ By the *Purāna-Mahābhārata* period we mean the general historical period envisaged in these books and not the particular date of their final recension

² Authors by whom some writings on music are available and still existing works are marked with +

SHIVA

Shankara, Shambhu, Parameshthī, Vighnesha, Shashānka, Shashimaulī, Indra.

Then: Chandī, Shanmukha, Bhṛīngī, Kuvera, Vikrama, Gaurī, Pārvatī, Mahādeva, Vallabha, Shārdūla I, Sadā Shiva+, Svati, Rāvana,

NANDIKESHVARA+

These names are mainly mentioned by Nandikeshvara and in the *Bṛihaddeshī*'s+ commentary.

* * * *

To the third tradition, that of *Hanumāna*, appear to belong: Atri, Kapila, Bhṛīgu,

HANUMĀNA

Angada, Kinnarasha, Kushika, Guna, Sarasvatī, Bali, Yaksha, Daksha, Vyāla, Samudra, Shashi, Bhāskara, Shauri, Gopipati, Shrīnātha, Shrīvatsa, Hari I, Hari II, Harishchandra.

Later come: Chitraratha, Gāndharva Rāja I, Arjuna, Rambhā, Kshetrapāla, Ugrasena.

These names are mainly mentioned in the *Sangīta Makaranda*+, the commentary on the *Bṛihaddeshī*+ and the work of Gāndharva Rāja II+.

* * * *

All the names so far mentioned are anterior to the *Purāna*-s and the Epics (*Mahābhārata*, *Rāmāyana*).

* * * *

Then come a series of authors who seem to have lived between the Epic-Puranic age and the first century of the Christian era, such as:

Kirtidhāra Āchārya, Mātragupta, Kshemarāja, Lohita Bhattaka, Sumantu, Kshetrapāla, Ugrasena, Bhatta Tandu, Shārdūla II,

KOHALA+

Devendra, Durgā Shakti+, Ganeshvara, Pārvatīpati, Sharva, Vātsya, Vāsuki, Shāndilya, Vishākhila+,

DATTILA+,

NĀRADA II+, (*Sangīta Makaranda*)+,

Rudrata, Chatura+

Bṛihaddeshī's commentary+

Māghesha, Girisutā, Gāndharva Rāja II+,

NĀRADA III (*Chalvārīṃshach'hata Rāganirūpanam*)+

Several names mentioned in later works may be variants of the names of earlier authors, chosen for the sake of the metre, as all the treatises are in verse form. Pārvatī-pati (the husband of Pārvatī) and Sharva (the refuge), for example, are names of Shiva, they may stand for Shiva, the first expounder of music, or for some of his later followers, Māghesha (Lord of riches) may be Indra, Kamalāsyaka may be Brahma. Yet it would be incautious to make such assertions without evidence since these are names that occur frequently.

The Kshemarāja mentioned by Kohala cannot be the celebrated disciple of Abhinava Gupta, since Kohala's latest possible time is the fourth century A D, six centuries before Abhinava Gupta.

The Second (Buddhist) Period

This period extends from the Epic-Puranic period to the early medieval Hindu revival. We may generally term it Buddhist because, according to Hindu tradition, Buddhism rose and declined in India within the limits of this millennium.

A few important works that probably belong to the beginning of this period are extant (see previous chart). These include extensive fragments of Kohala.

The lower limit of the early first period works is set by the fact that Kohala and Dattila are mentioned in the *Nāṭya Shāstra* of which the last re-editing, as we have already seen, is variously dated between the second century B C and the fourth century A D, the first of these dates being the more likely.

Very few of the numerous musical works of this second period have so far been found, neither have they been edited nor studied. In most cases we have to content ourselves with authors' names without attempting to establish their chronological relationship. The authors who can safely be attributed to this period are those not mentioned by any writer of the pre-Puranic-Epic period but mentioned as ancient authorities by authors of the tenth, eleventh and twelfth centuries (chiefly Abhinava Gupta, Shāradātanaya, Nānya Bhūpāla, Pārshvadeva and Shārngadeva).

This gives us a list of names, some of which may, however,

belong to the first period or to the earlier part of the third period.

The main writers of this second (Buddhist) period are:

Āstika, Apisali (author of a *Shikshā*), Uttara, Uvata, Umāpati, Kātyāyana, Kāmadeva, Kumbhodbhava, Ghantaka, Chhatraka, Datta, Devarāja (who may be Devendra), Drauhini, Dhenuka, Priyātithi, Bindu Rāja, Brihat Kashyapa, Bhatta, Bhatta Yantra, Bhatta Sumanas, Bhatta Vriddhi, Bhatta Gopāla, Bhatta Shubhākara (commentator on *Nāradya Shikshā*), Rahula, Vena, Vyāsa, Vāchaspati, Shri Harsha (different from the patron of the seventh-century poet Bāna), Sakali garbha, Sūrya (may be Bhāskara), Sureshvara, Someshvara I (different from the two later Someshvara-s, authors respectively of *Mānasollāsa* and *Sangīta Ratnāvalī*).

The Third (Medieval) Period

The main authors of this period can be divided into two groups:

- I. Udbhata (late eighth century): comm. on *Nāṭya Shāstra*.
 Lollata (between Udbhata and Abhinava Gupta, c. 825):
 comm. on *Nāṭya Shāstra*.
 Shankuka (id., c. 850): comm. on *Nāṭya Shāstra*.
 Utpala Deva (early tenth century; the teacher of Abhinava's teacher).
 Nrisimha Gupta (Abhinava's teacher and father).
 Abhinava Gupta (end of tenth century): *Abhinava-bhārati*,
 comm. on *Nāṭya Shāstra*.
 Bhoja (King) (1010-1055).
 Simhana (eleventh century or early thirteenth, before Hammira).
 Abhaya Deva (a Jain) (1063- ?).
 Mammata (1050-1150): *Sangīta-ratna-mālā*.
 Rudrasena (before Devendra).
 Someshvara II (1131): *Mānasollāsa* or *Abhilāshārtha-chintāmani*.
 Lochana Kavi (1160): *Rāga-taranginī*.
 Paramardī (1165-1203 ?).
 Devendra (after Bhoja): *Sangīta-muktāvalī*.
 Someshvara III (1174-1177): *Sangīta-ratnāvalī*.

Shāradātanaya (c 1200) *Bhāva-prakāsha*

Nānya Bhūpāla or Nānya Deva (eleventh or twelfth century, between Abhinava Gupta and Shārngadeva)

Sarasvatī-hṛdayālamkāra or *Bharata-bhāshya*

Jatra Simha (c 1213? before Hammira) *Bharata-bhāshya*

Shārngadeva (1210-1247) *Sangīta-ratnākara*

There has been some speculation about the dates of Lochana Kavi. The *Rāga-taranginī* bears the date 1082 of the Shaka era. This would be A D 1160. Lochana Kavi, however, mentions the names of Jayadeva and Vidyāpati. The dates of Jayadeva are about A D 1116 but the known Maithili poet Vidyāpati is thought to have lived around the fourteenth century. Either Lochana lived after the fourteenth century, or this name refers to some other Vidyāpati. It appears that there is a local Shaka era in Eastern India according to which 1082 would be A D 1700. This would ascribe Lochana to a much later date. Against this supposition there is the fact that Lochana is quoted by Hṛdaya Nārāyana (c 1667) who in turn is quoted by Bhava Bhatta (c 1700).

The work of Lochana has therefore been dated either A D 1160, or fourteenth century (after Vidyāpati), or A D 1700.

Since the last date seems impossible, it is likely that the earlier of the remaining dates is the correct one and that, as some Bengali scholars assume, there was an earlier Vidyāpati.

II Jayasimha (before Hammira)

Ganapati (c 1253? before Hammira)

Jayasena (c 1253) *Nṛtta-ratnāvalī*

Hammira (1283 or 1364) *Sangīta-shṛṅgāra-hāra*

Gopāla Nāyaka (1295-1315)

Pratāp (King?) *Sangīta-chūdāmaṇi*

Palkuriki Somanātha (thirteenth-fourteenth century)

Panditārādhyacharita, *Bāsava Purāna*

Vasanta Rājā (King Kumāragiri, before fourteenth century) *Vasanta-rājīya Nāṭya Shāstra*

Digambara Suri (before Pārshvadeva)

Pārshvadeva (before Simha Bhūpāla, after Bhoja and

Paramardī) *Sangīta-samaya-sāra*

Shārngadhara (1300-1350) *Shārngadhara-paddhati*

Haripāla (1309-1312) *Sangīta-sudhākara*

Shrī Vidyā Chakravartin (early fourteenth) *Bharata-*

sangraha.

Sudhākālāsa (1323-1349): *Sangīta-upanishad.*

Simhabhūpāla (c. 1330): *Sudhākara*, a comm. on *Sangīta-ratnākara.*

Vishveshvara (c. 1330).

Vidyāranya (1320-1380): *Sangīta-sāra.*

Vema Bhūpāla (late fourteenth-early fifteenth century): *Sangīta-chintāmani.*

Gopendra Tippa Bhūpāla (1423-1446): *Tāla-dīpikā.*

Kumbhakarna (1433-1468): *Sangīta-rāja, Sangīta-krama-dīpikā.*

Kallinātha (middle fifteenth century): *Kālānidhi*, a comm. on the *Sangīta-ratnākara.*

Kamala Lochana (c. fifteenth century ?): *Sangīta-chintāmani, Sangītāmrita.*

Keshava (between 1240 and 1664): comm. on the *Sangīta-ratnākara.*

Rāmānanda Nārāyana Shiva Yogin (after thirteenth century): *Nāṭya-sarvasva-dīpikā.*

The most extensive work of the medieval period is the *Sangīta-ratnākara* of Shārṅgadeva (A.D. 1210-1247). It has several valuable commentaries, two of which—by Simhabhūpāla (c. 1330) and by Kallinātha (fifteenth century)—have been published. The *Rāga-taranginī* of Lochana may also belong to this period.

In the first chapter of his *Sangīta-ratnākara*, Shārṅgadeva gives the following list of his chief predecessors:

“Sadāshiva, Shiva, Brahma, Bharata, Kashyapa Muni, Matanga, Yāshtika, Durgā-shakti, Shārdūla, Kohala, Vishākhila, Dantila (Dattila), Kambala, Ashvatarā, Vāyu, Vishvāvasu, Rambhā, Arjuna, Nārada, Tumburu, Ānjaneya, Mātrigupta, Rāvana, Nandikeshvara, Svāti, Guna, Bindurāja, Kshetra-rāja, Rāhala, Rudrata, Nānya Bhūpāla, and king Bhoja, Paramardī and Somesha the world emperor; then the commentators of Bharata: Lollata, Udbhata, Shankuka, Bhatta, Abhinava Gupta, the famous Kīrtidhara and many more in the past were experts in music.”

The Fourth (Modern) Period

With the advent of foreign invasions musical theory quickly

decays, although musical practice maintains its standards. A few authors, however, attempt to re-establish the old theory and to re-shape it, so that it may agree with new ideas. Musicians had found many points of the reconstructed medieval theory irrelevant when confronted with the practice of their day. A series of attempts was therefore made to reconcile the theory with the facts. The chief works of this kind are the *Svaramela-kalānidhi* of Rāmāmātya (1549), the *Rāga-vibodha* of Somanātha (1610), the *Sangīta-darṣana* of Dāmodara Mishra (1625) and especially the *Chaturdandī-prakāśhikā* of Venkata Makhin (1620), the systematizer of South Indian music. Yet these efforts merely added to the confusion, for, in their attempt to explain apparent contradictions, the later authors often forced far-fetched interpretations upon ancient technical terms and theories.

A series of more recent works span the period between ancient and modern music. In Northern India the *Sangīta-pārijāta* of Ahobala (c. 1690) and the *Sangīta-dāmodara* of Shukambara (seventeenth century) are considered the most important.

The Chief Writers of the Fourth (Modern) Period

Harnāyaka (c. 1500) *Sangīta-sāra*

Meshakarna (before 1509) *Rāga-mālā*

Madanapāla Deva (c. 1528) *Ānanda-sanjīvana*

Lakshmī Nārāyana (first quarter of the sixteenth century)

Sangīta-sūryodaya

Lakshmīdhara (sixteenth century) *Bharata Shāstra-grantha*

Rāmāmātya (1550) *Svaramela-kalānidhi*

Pundarika Vitthala (late sixteenth century) *Shadrāga-chandrodaya*, *Rāga-mālā*, *Rāga-manjarī*, *Nartana-nirnaya*

Tanappāchārya (Tān-sen ?) (guru of Venkata Makhin c. 1600)

Mādhava Bhatta (before 1610) *Sangīta-chandrikā*

Somanātha (1610) *Rāga-vibodha*

Govinda Dīkshita (1614) *Sangīta-sudhā*

Govinda (?) *Sangraha-chūdāmani*

Venkata Makhin (c. 1620) *Chaturdandī-prakāśhikā*

Dāmodara Mishra (1625) *Sangīta-darṣana*

Hridaya Nārāyana Deva (c. 1667): *Hridaya-kautuka*,
Hridaya-prakāsha.

Bāsava Rājā (1698-1715): *Shiva-tattva-ratnākara*.

Ahobala (before Shri Nivāsa and Bhava Bhatta; first half
of seventeenth century or earlier): *Sangīta-pārijāta*
(translated into Persian in 1724).

Shri Nivāsa (late seventeenth century): *Rāga-tattva-vibodha*.

Abhilasa (seventeenth century): *Sangīta-chandra*.

Jagaddhara (fourteenth to seventeenth century): *Sangīta-sārasva*.

Kamalākara (later than 1600): *Sangīta-kamalākara*.

Kikarāja (seventeenth century): *Sangīta-sāroddhāra*.

Jagajjyotirmalla (seventeenth century): *Sangīta-sāra-sang-
raha*, *Sangīta-bhāskara*.

Raghunātha Bhūpa (seventeenth century): *Sangīta-sudhā*.

Nanga Rājā(?): *Sangīta-gangā-dharana*.

Veda or Mudaveda (during the reign of Shāhājī 1684-1712):
Sangīta-makaranda, *Sangīta-pushpānjali*.

Vangamani (seventeenth century): *Sangīta-bhāskara*.

Shukambhara (before eighteenth century): *Sangīta-dāmo-
dara*.

Somanārya (after 1609): *Nātya-chūdāmani*.

Bhāva Bhatta (alias Anushtupa Chakravartī, after Ahobala
c. 1700): *Anuṣṭupa-sangīta-ankuṣha*, *Anuṣṭupa-sangīta-ratnā-
kara*, *Anuṣṭupa-sangīta-vilāsa*.

Tulajādhīpa (ruled 1729-1735): *Sangīta-sārāmṛita*.

Nārāyana (King) (late eighteenth century): *Sangīta-
nārāyana*.

Kavi-ratna Nārāyana (eighteenth century): *Sangīta-sarani*.

Govinda (eighteenth century): *Sangīta Shāstra-sankshepa*.

Gopinātha Kavi Bhūshana (late eighteenth century):
Kavichintāmani.

Pratāp Singh (1779-1804): *Sangīta-sāgara*.

Balarāma Varmā (ruled 1798-1810): *Bala-rāma-Bharata*.

Shrikantha (late eighteenth century): *Rasa-kaumudī*.

The Authors of the Nineteenth and Twentieth Centuries are:

Rāma varmā Mahārāja: *Sangīta-kṛitayah*.

Appā Tulsi: *Abhinava-tāla-manjarī*, *Rāga-chandrikā*, *Rāga-
kalpa-drumāṅkura*, *Sangīta-sudhākara*.

- Krishnānanda Vyāsa *Rāga-kalpā-druma* (1843)
 Appalāchārya *Sangīta-saṅgraha-chintāmaṇi*
 Sourindra Mohan Sharmā (Rājā Tagore) *Sangīta-sāra-saṅgraha* (1875)
 Vishnu Sharmā (Pandit Bhātkhande) *Abhinava-rāga-man-jarī* (1921), *Shrīmāllakshya-saṅgītam* (1921)

The Main Authors in North Indian Languages other than Sanskrit are

- Rāja Māna-simha Tomār (1486-1518) *Māna-kautūhala* (Hindi)
 Tān-sen (c 1549) *Rāga-mālā* (Hindi)
 Shri Rāma Mallā *Rāga-vichāra* (Hindi)
 Harivallabha *Sangīta-darpana* (Hindi) (mss dated 1673)
 Gangā Rām *Setū* (comm on *Sangīta-ratnākara*) (Hindi)
 Deo Kavi *Rāga-ratnākara* (1673) (Hindi)
 Saiyid "Abd-al Wah" Uzlat *Rāga-mālā* (1759) (Hindusthani)
 Kavi Krishna *Rāga-kutuhala* (1781) (Hindi)
 Maharājā Sawai Pratāp Simha Deva of Jaipur (1779-1804) *Sangīta-sāra* (Hindi)
 Muhammad Rezza *Nāgmat-e-Asaphi* (1813) (Persian)
 Rādhā Mohan Sen *Sangīta-taranga* (1818) (Bengali)
 Diwān Lacchirām *Buddhi prakāsha-darpana* (1823) (Hindi)
 Krishnānanda Vyāsa Deva *Rāga Kalpā druma* (1842-1849) (Hindi and Bengali)
 Chhatra Nripati *Pāda-ratnāvalī* (1854) (Hindi)
 Chunni Lalji Gossain *Nāda Vinoda* (1896) (Hindi)
 Bhānu Kavi (Jagannāth Prasad) *Kāvya-prabhākara* (1909) (Hindi)

CHAPTER II

BASES OF MELODIC STRUCTURES

The Nature of Sound

"INTELLIGIBLE sound (Nāda) is the treasure of happiness for the happy, the distraction of those who suffer, the winner of the hearts of hearers, the first messenger of the God of Love. Easy of access, it is the nimble beloved of passionate women. May it for ever be honoured. It is the fifth approach to the Eternal Wisdom, the Veda." (*Sangīta Bhāṣhya*.)

In Indian musical theory it is said that there are two kinds of sound, one a vibration of ether, the other a vibration of air. The vibration of ether, which cannot be perceived in the physical sense, is considered the principle of all manifestation, the basis of all substance. It corresponds to what neo-Pythagoreans called "music of the spheres". It forms permanent numerical patterns which are the basis of the world's existence. This kind of vibration is not caused by a physical shock as are audible sounds. It is therefore called *anāhata*, "unstruck". The other kind of sound is an impermanent vibration of air, an image of the ether vibration. It is audible and always produced by a shock. It is therefore called *āhata* or "struck".

Thus the *Sangīta-makaranda* (I, 4-6) says:

"Sound is considered to be of two kinds, unstruck and struck; of these two, the unstruck will be first described.

"Sound produced from ether is known as 'unstruck'. In this unstruck sound the Gods delight. The Yogis, the Great Spirits, projecting their minds by an effort of the mind into this unstruck sound, depart, attaining Liberation."

"Struck sound is said to give pleasure, 'unstruck' sound leads to Liberation." (*Nārada Purāna*.)

But "this (unstruck sound) having no relation with human enjoyment does not interest ordinary men." (*Shiva-tattva-ratnākara*, 6, 7, 12.)

Not all audible vibrations are intelligible sounds. The sounds used in music are those whose mutual relationships form an image of the basic laws of the universe as represented by the unstruck sounds. Thus musical sounds have it in their power to reproduce the first creation of the Primordial Intellect. This creation is at the same time a rhythm and a thought. The main characteristic of musical sounds is that they convey ideas, emotions, and at the same time form simple harmonious relations. This is why, according to a symbolic etymology, musical sound is called "Nāda", "intelligible sound", and is said to result from the union of physical breath with the fire of intellect.

"The syllable 'Na' means breath, the syllable 'Da' the fire (of intellect). Born of the union of breath and fire, intelligible sound is called Nāda." (*Sangīta-makaranda*, 4, 18, reproduced in *Sangīta-ratnākara*, 1, 3, 6, and *Sangīta-darpana*, 1, 39.)

Three main elements are considered in musical sound—intensity, interval and timbre.

Intensity is the relative strength of the sound, whether soft or powerful.

The interval is defined by the relative pitch (shruti).

Timbre arises from the various possibilities of resonance which differentiate the sound of instruments and voices.

Musical sounds are classified into five main categories.

"Struck sounds are known to be of five kinds—produced by the nail (strings), by wind (flutes), from leather (drums), from metal (percussion instruments) or from the body (the voice)." (*Sangīta-makaranda* 1, 7.)

The Tonic or Drone

All music is based upon relations between sounds. These relations can be worked out in different ways, and thus give rise to varying musical systems, each of which has possibilities of expression peculiar to itself.

The modal group of musical systems, to which practically all Indian music belongs, is based on the establishment of relations between a permanent sound fixed and invariable, the "tonic" or *Sa*, and successive sounds, the notes.

Modal music is not merely melody without accompaniment, neither has a song or melody, in itself, anything to do with

mode.

Indian music, like all truly modal music, is built on the independent relationship of each note to the tonic. The relationship to the tonic determines the meaning of any given sound. The tonic must therefore be constantly heard. It can either be sounded as a drone or repeated at frequent intervals, as is done on stringed instruments. It should be remembered that the drone is not merely intended to keep the singers on pitch, so that they can always attack at the correct pitch, but it is the key to all modal expression. As long as the hearer has not entirely identified himself with the tonic, but still perceives drone and melody as separate entities, it will remain impossible for him to follow or understand the meaning of modal music.

At different periods it appears that different notes were taken as the starting-point of the scale. But *Shadja* (Sa, C), the tonic of all modern music, seems to have been considered as such since medieval times.

"*Shadja* (Sa, C) is the first of all the notes and so it is the main or chief note." (Simhabhūpāla commentary on the *Saṅgīta-ratnākara*, I, 4, 6-8.)

"Dattila explains that the *Shadja* (the tonic) may be established at will at any pitch (on any shruti) and that, by relation with it, the other notes should be established at the proper intervals." (Simhabhūpāla commentary on the *Saṅgīta-ratnākara*, I, 4, 15-16.)

However, a common tonic is necessary so that the *rāga*-s may be easily compared. In the notations of *rāga*-s which form the second part of this book, the tonic is noted in every case as C, since C is usually considered the first note of the Western scale, just as *Sa* (in present-day music always the tonic) is the first note of the Indian scale.

With C as the tonic, the white keys of any keyboard instrument, such as the piano or organ, give approximately the major mode or unaltered (shuddha) scale, the scale of *Bilāval* in modern Indian music. The different modes can be visualized as modifications of this basic (shuddha) scale.

The fact that the tonic used by most singers is lower—often B flat—is not important. Once the real nature of each mode has been properly understood (and practice shows that

this is easier if the tonic is always noted as C) the modes can be transposed so as to commence on any note that may be suitable for different voices or instruments

The Three Main Octaves (Saptaka-s)

Music develops mainly within three octaves. In singing, these correspond to the resonances of chest, throat and head. These three octaves are called "low" (mandra), "medium" (madhya) and "high" (tāra)

"In practice there are three [octaves in singing], the lower one [resounding] in the chest, the middle one in the throat and the higher one in the head. Each being the double of the other" (*Sangīta-makaranda*, 4, 19 and *Sangīta-ratnākara*, 1, 3, 7)

"[They are] in order 'low octave' in the heart, 'middle octave' in the throat, 'high octave' in the head" (*Sangīta-darpana*, 1, 49)

And

"The lower octave has its place in the chest, the middle octave in the throat, the high octave in the forehead. Although they are similar, each is respectively the double of the preceding one" (*Nārada Samhitā*)

The Seven Notes (Svara-s)

The note (svara) is not only a definite pitch of sound. The word *svara* means a sound plus an expression, so it would be more correctly rendered as "expressive note"

Matanga says

"The sound that generates an expression is called *svara* (note)" (*Bṛhaddeshī*, comm. on 1, 63)

"The word *svara* means 'that which shines of itself'—from *rājri* (to shine) with the prefix *sva* (self)" (Matanga, *Bṛhaddeshī*, 1, 63)

Ancient Indian music recognizes seven main and two secondary *svara-s*. These notes represent definite intervals and form the basic unaltered or "pure" (shuddha) scale. They can be raised or lowered to form other scales. In that case they are considered "altered" (vikṛta). The notes that form the basic scale are called pure (shuddha), notes lowered by half a

tone are said to be *komala* (soft—flat); notes raised by half a tone are called *tīvra* (sharp).

According to the mode, the notes can be slightly sharper or flatter, thus forming certain microtonal intervals which convey particular expressions. Hence the microtonal scale, or scale of the *shruti*-s, is considered to be the fundamental basis of musical scales, the notes or *svara*-s depending for their significance on the place they occupy in the microtonal scale.

Matanga says:

“*Shadjā* (C) and the other notes (*svara*-s) are always manifested through the ‘interval they form with the tonic’, their *shruti*, just as a pitcher in the dark is made manifest by a lamp.” (*Bṛhaddeshī*, 1, 36.)

The commentary on the *Rāga-vibodha* (1, 14) adds:

“What then constitutes a note, a *svara*? What is the particularity of these seven sounds? It is their intelligibility, their capacity to please the mind, to appeal to the consciousness of the hearer. They must do this of themselves, without external aid.”

“The sound is first heard as an interval, a *shruti*; but the resonance that immediately follows, conveying of itself (without external aid) an expression to the mind of the hearer, is called a *svara*, a ‘musical note’.” (*Sangīta-ratnākara*, 1, 3, 24–25.)

And:

“The expressive sound, attractive and pleasing, which resounds immediately after the exact interval (the *shruti*) has manifested itself, is called a *svara* (note).” (*Sangīta-darṇana*, 1, 57.)

The notes are seven in number.

“From the [twenty-two main] intervals (*shruti*-s) come the seven notes (*svara*-s) called *Shadjā*, *Rishabha*, *Gāndhāra*, *Madhyama*, *Panchama*, *Dhaivata*, *Nishāda*.” (*Chatvārim-shach'hata-rāga-nirūpanam*, 1, 18–19; *Sangīta-darṇana*, 1, 167; *Shiva-tattva-ratnākara*, 6, 7, 22–23.)

“Others call them (for short): *Sa* (Do), *Ri* (Re), *Ga* (Mi), *Ma* (Fa), *Pa* (Sol), *Dha* (La), and *Ni* (Si).” (*Sangīta-darṇana*, 1, 168.)

These notes, classified according to their relative importance, form the different parts of the “personality” of the “modal scale” (*mūrch'hanā*).

"The note *Sa* (C, the tonic) is said to be the soul, *Ri* (D) is called the head, *Ga* (E) the arms, *Ma* (F) the chest, *Pa* (G) the throat, *Dha* (A) the hips, *Ni* (B) the feet. Such are the seven limbs of the modal scale" (*Nārada Samhitā*, 2, 53-54)

"These notes, which are seven as a rule, correspond, in the view of Matanga, with the seven basic elements of the physical body, and issue from the seven centres of the subtle body (chakra-s)" (Kallinātha commentary on the *Sangīta-ratnākara*, 3, 23)

The *svara*-s or notes of the unaltered (shuddha) scale are associated with the cries of animals

Although this association has been held to be symbolical, musicians claim that most animals have a distinct cry based on two notes. If we consider the lower note as the *Sa* (Do), the higher note may give us a second, a third, a fourth, etc

"*Shadja* (the octave) is sounded by the peacock, the next note *Rishabha* (the major second) is uttered by the *chātaka* bird. The goat bleats *Gāndhāra* (the minor third), the heron (krauncha) cries *Madhyama* (the perfect fourth). In the season of flowers, *Panchama* (the perfect fifth) is softly sung by the cuckoo (kokila). *Dhaivata* (the natural sixth) is croaked by the frog in the season of rains. At all times, O Goddess! *Nishāda* (the minor seventh) is trumpeted by the elephant" (Kohala quoted in *Bṛhaddeshī*, commentary on 63)

The ancient Indian natural scale, compared to the Western major mode, contains an E flat and a B flat (modern *Ga komala* and *Ni komala*)

A similar list of animal cries is given in the *Nārada Samhitā* (2, 55-56) and a slightly different one in the *Māndukī Shikshā* (1, 9) and in the *Nārādīya Shikshā* (I, V, 4-5) also reproduced in the *Shiva-tattva-ratnākara* (VI, 7, 33-35)

The peacock's octave starts from the upper note. Kālidāsa says

"Both listened to the lovely cry of crested peacocks raising their heads at the sound of the axle of the chariot. In this cry resound two kinds of *Shadja svara*" (*Raghuvamsha*, 1, 39)

The Intercalary Notes, Kākalī Ni and Antara Ga

In ancient music two accessory notes were added to the seven main notes dividing the major tones *Ni Sa* (B♭ C) and

Ga Ma (E♭ F) into half-tones. These two intercalary (*sād-hārana*) notes were called *Kākalī Ni* (the pleasing *Si*) and *Antara Ga* (intermediary *Mi*).

“When two *shruti*-s (half a tone) from *Sa* (C) pass into *Ni* (B♭), this is (called) *Kākalī* (B♭). The same from *Ma* (F) into *Ga* (E♭) is *Antaka* (E♭).” (Quoted in *Simhabhūpāla* comm. on the *Sangīta-ratnākara*, I, 3, 40, and in *Shiva-tattva-ratnākara*, VI, 7, 51.)

“The note called *Kākalī* is obtained by raising *Ni* (Si♭) by two *shruti*-s. The note called *Antara* is obtained from *Ga* (E♭) in the same way. They are not properly considered notes (*svara*-s) because they cannot be taken as tonic (*amsha*). So *Nishāda* (B♭) and *Gāndhāra* (E♭) are given prominence over them.” (Dattila, 16–17, also quoted by *Simhabhūpāla* comm. on the *Sangīta-ratnākara*, I, 3, 56.)

The Intervals (Shruti-s)

The names and classification of the intervals, the *shruti*-s, as given in the ancient and medieval books, present many problems of interpretation. There are various reasons for this: (1) at different periods, different notes were taken as the tonic; (2) the more ancient treatises envisaged a descending scale, more recent ones an ascending scale; (3) the scale considered unaltered differed from one period to another. These difficulties will not surprise us if we remember that hundreds of years elapsed between the writing of many of the treatises.

As we have already seen, a note and its name depend upon its relationship to the tonic; it can be a fourth, a fifth (a *Ma* (F), a *Pa* (G), etc.) only through relationship to a basic sound (in modern Indian music, always the *Sa*).

Notes, therefore, depend upon intervals. The intervals from which the notes are produced are called *shruti*-s (audible), since it is only through hearing that the idea conveyed by the intervals can be grasped.

“It is grasped by the ear, hence it is called ‘shruti’ (audible).” “‘Shru’, which means ‘hearing’, is the root of the word. To this is added the (feminine) suffix ‘ktin’ (denoting an abstract noun). In this way the term ‘shruti’ is defined by linguists (to represent) the ‘means of expression’.” (*Bṛihad-*

deshi, commentary on 1, 26)

The number of theoretically possible intervals in relation-ship to a given note is obviously limitless. Yet the number of intervals used in music is comparatively small. This is due to the limitations of the mental mechanism through which we can distinguish sounds.

Intervals do not merely produce pleasing or unpleasing sensations. Like words, they convey distinct and definite expressions to the mind of the hearer.

Indian musical theory considers that the ear can perceive sixty-six distinct meaningful intervals within the compass of an octave. We find, however, that among these intervals twenty-two are mainly used in music. These twenty-two which form well-defined ratios with the tonic are those which convey to our mind the most distinct meanings. In practice, we could say that within one octave it is possible to distinguish accurately twenty-two distinct expressions, and sixty-six distinct pitches of sound, beyond this we can naturally conceive of limitless relationships of sounds, but since we cannot distinguish them they have no reality in music.

"Some experts in the knowledge of intervals say that they number twenty-two. Others speak of sixty-six and some consider them numberless" (Kohala, quoted in *Bṛhaddeshī*, commentary on 1, 28, and in both *Śimhabhūpāla*'s and *Kalinātha*'s commentary on the *Saṅgīta-ratnākara*, 1, 3, 8-9 and 10-16)

The complete scale of the *śruti*-s is not a musical scale which can be directly used in a melodic form. It is merely the assemblage of the different intervals used in different modes, their ordered arrangement for purposes of study and comparison.

It is not possible to sing the scale of the *śruti*-s accurately in succession (as some singers pretend to do), but they can all be sung with perfect accuracy when they are embodied in melodic figures that have a definite expression. Hence Pārshvadeva says

"The twenty-two sounds cannot be produced (in succession) by the throat. They should therefore be demonstrated on a stringed instrument" (Attributed to the *Saṅgīta-samaya-sāra*, though not found in the printed edition)

The Measurement of the Shruti-s

According to the explanations given in the *Nāṭya Shāstra* and by Matanga in his *Bṛīhaddeshī*, the interval, or *shruti*, used as the divisional basis of the octave appears to be the comma diesis $81/80$, defined as the difference between *Pa* (modern Dha (A)), considered as the upper fourth from *Ri* (modern Ga (E)), and *Pa* as the lower fourth from *Sa* (modern Ri (D)). This comma is called the "measuring" or "standard" interval.

"The interval produced by the raising or lowering of *Panchama*, [which can also be envisaged as a] softening or [a difference in string-] length, is called the 'standard interval' (pramāna shruti)." (*Nāṭya Shāstra*, 28, 22; and *Bṛīhaddeshī*, comm. on 1, 28.)

If we add the minor tone (G A, ancient Ma Pa) of 3 *shruti*-s to the perfect fourth (D G, ancient Sa Ma) of 9 *shruti*-s and then to another perfect fourth (A D, ancient Pa Sa) of 9 *shruti*-s, we find the octave from Ri to Ri (D to D) too short:

$$9 \text{ shruti-s} + 3 + 9 = 21 \text{ (i.e. } 4/3 \times 10/9 \times 4/3 = 160/81\text{)}.$$

The difference between this and the real octave ($2/1$) is one shruti or comma ($81/80$). Thus: $21 + 1 = 22$, or $160/81 \times 81/80 = 2/1$.

To obtain a perfect octave, we must then either make the fourth *Dha Ri* (A D) too large ($27/20$), or raise the harmonic *Dha* ($A = 5/3$) into *Dha+* ($A+ = 27/16$),¹ changing the minor tone *Pa Dha* (G A = $10/9$) into a major tone *Pa Dha+* ($G A+ = 9/8$). But in this case the fourth *Ga Dha+* (E A+) becomes too large. To correct it, we may raise the *Ga* (E) into *Ga+* (E+); but this will destroy its consonance with *Ni* (B).

In this way we always have to choose between one perfect fourth or the other, the difference involved being in every case the interval of one comma ($81/80$) or 5 savart-s which first appears on the *Dha* (A) (ancient Pa).

This comma was considered by the Greeks, the Arabs and the Hindus as the logical unit for any practical division of the scale.

The difference between important simple intervals can generally be expressed in terms of commas. For example, the difference between the major and minor tone $9/8$ and $10/9$ (Sa Ri and Ri Ga) is $9/8 \times 9/10 = 81/80$; the difference

¹ See notation signs on pp. 38-43

between the major half-tone ($16/15$) and the limma ($256/243$) is $16/15 \times 243/256 = 81/80$, the difference between the two minor thirds $C E\flat+ = 6/5$ and $C E\flat = 32/27$ is $6/5 \times 27/32 = 81/80$, the difference between the harmonic major third $C E$ ($Sa Ga$) = $5/4$ and the Pythagorean third $C E+$ ($Sa Ga+$) = $81/64$ is $81/64 \times 4/5 = 81/80$, etc

This explains why a scale formed by adding twelve other notes, each raised by one comma, to the twelve notes of the basic scale and twelve more, each lowered by one comma, will give us practically all the intervals used in music

The complete division of the octave is obtained by adding or subtracting either one or two commas from each of the twelve notes of the basic chromatic scale. This gives us a series of fifty-three intervals, which cannot all be used in modal scales though they may come into use through modulations (changes of tonic) or in certain forms of polyphony

If we further divide the disjunctions of this scale which appear at each half-tone so as to form quarter-tones, we obtain the division of the octave (Sa to upper Sa) into sixty-five intervals—that is, counting the note that forms the octave itself, the scale of sixty-six intervals or *shrutis*-s spoken of by Kohala

It has been suggested that the sixty-six intervals of Kohala may refer to the twenty-two *shrutis*-s in three octaves. But this is not usually accepted

It should be noted that this scale makes use of only two kinds of intervals—commas of 5 savart-s and disjunctions of 8 savart-s. This is, in fact, besides the Pythagorean division into seven notes, the only possible complete division of the octave which uses only two sorts of intervals and which respects the fundamental consonances (fourth, fifth, etc.) All other divisions of the octave are either irregular or, as is the case with all tempered scales, never give perfect consonances

The cycle of intervals gives us a division of the octave into fifty-three. This corresponds exactly to the number of letters in the complete phonetic alphabet of Sanskrit grammarians, in which the letters are arranged according to the five places of articulation, in each of which can be pronounced a vowel (short or long) and five consonants, a drawn unaspirate, a drawn aspirate, a thrown unaspirate, a thrown aspirate, and a

nasal. Added to these, there are further vowels and consonants, using more than one place of articulation to form a total of fifty-two letters.

To these is added the sacred syllable (AUM) considered to be the origin and end of all articulate sounds and corresponding to the *Sa* (C) of music which has a similar function with regard to all the *shruti*-s. AUM is made of the guttural A, the labial U and the nasal M, the three extreme points of articulation, which form a triangle that includes all other letters. Thus, the laws that govern musical and articulate sound appear to the Hindu theorists strictly parallel and interdependent, both kinds of sound serving, though on different levels, to manifest ideas.

The Notation of the Shruti-s

To proceed with the theory of the *shruti*-s, we need an accurate and simple way of notating exact intervals. We have adopted the following method since it appeared to be the simplest and most convenient.

In order to notate the sixty-six intervals of the complete scale, we shall use conventional signs, placed beside the names of the notes within the frame of the harmonic form of the chromatic scale, which is the scale of modal music and which allows only one sort of accidental (either flat or sharp) for each note. Thus, the sign -- after the note means that the note is lowered by two commas; the sign - means that the note is lowered by one comma; the sign + means that it is raised by one comma, the sign ++ that it is raised by two commas.

We shall leave aside the quarter-tones that divide the disjunction into two approximately equal parts since they are never used in Indian musical practice.

For the notation we use the following symbols:

The notes of the diatonic series based upon C are written, as usual, C . Notes lowered by one comma are written c . Those raised by one comma are written $\text{C}^\flat$. The rare notes raised by two commas are written $\text{C}^\sharp$, those lowered by two commas $\text{c}^\flat$. Thus the notation of the notes in ordinary use is:

The Sixty-six Shruti-s

Many of these theoretical intervals are seldom used in practice. The twenty-two (or twenty-five) most prominent intervals, which correspond to clearly perceptible and distinct expressions and which are used in the teaching of modal music, are usually considered to be the following:

Under no circumstances can these twenty-two divisions be considered equal. They refer only to twenty-two prominent intervals chosen out of the possible fifty-three (or sixty-six). In present day music a few other intervals are used, though seldom.

They are the rare F- and Bb--

The remaining divisions, necessary only when the tonic is changed, are not considered in modal practice.

As we have already explained, if we raise and lower by one comma each of the twelve notes of the fundamental Pythagorean chromatic scale, we get a scale of thirty-six notes which contains practically all the intervals that are used in any form of music.

Thus, in this scale each of the twelve notes has three positions—low, middle and high. This mode of division of the scale seems to have been used by the celebrated Tumburu, a celestial musician, considered to be the originator of one of the chief ancient systems of music, who wrote a treatise now lost.

Tumburu expresses the strident character of all the raised notes and the mellowness of the lowered ones by connecting them to the four humours of the body whose relative predominance is said to bring similar tendencies. He says:

“A sound that is high is harsh (piercing). The wise know it to be born from the wind.

“A low sound, deep and mellow, should be known as born from the bile.

“The attractive (perfect) sound is born from the lymph. It

is sweet and tender

"That which has the qualities of all three (the sound with vibrato) is known to be born from semen" (Attributed to Tumburu by Kallinātha, commentary on the *Sangīta-ratnākara*, I, 3, 10-16, and to Chatura in *Bṛhaddeshī*, commentary on, 27)

The Expression of the Shruti-s

The division of the octave into sixty-six intervals is theoretical. Although we can clearly perceive the differences in pitch of the different intervals and rapidly train our ear to recognize them, some will not succeed in conveying a definite meaning. The types of expression attributed to some of the intervals have been carefully classified by ancient writers. Each *shruti* was given a name depicting its character. In the system of Pārshvadeva, the names of the individual *shruti*-s were different in each octave. These types of expressions were further classified into five main groups or "families" of intervals called *jāti*-s "moderate, keen, broad, tender, and compassionate".

"*Dīptā* (keen), *Ayatā* (broad), *Karunā* (compassionate), *Mṛidu* (tender), *Madhyā* (moderate), these are the five families (*jāti*-s) of the *shruti*-s that are found in the notes" (*Sangīta-ratnākara*, I, 3, 27-28)

Because of the confusion that has resulted from the changes in scale and tonic the exact interpretation of the ancient *shruti*-s presents a number of problems.

The safest way to interpret them is to start from the actual expression attributed to the intervals as found in musical practice today. The notation of these expressions given in the analysis of the *rāga*-s has been worked out by careful measurement of the intervals used by musicians playing different *rāga*-s and by noting the expression each particular note conveyed to the musician and to his audience. It was found that the same shade of meaning was always attributed to the same intervals occurring in *rāga*-s with quite different characters. The scale we give here is only the result of such experiments in a particular tradition and may therefore be subject to improvement.

In the following table we compare the *shruti*-s as given by Shārṅgadeva with the experimental ones. A few slight differences remain to be clarified.

There is some difficulty in ascertaining which of the *shruti*-s of Shārṅgadeva really was the tonic. This has led to divergent interpretations. The three main interpretations have the scale starting from the *shruti*-s *Chhandovatī*, *Kshobhinī* or even *Ramyā*—corresponding to *Dha* (A), which is said to have been the ancient tonic of Nārada. The *Svaramela-kalānidhi* (A.D. 1549) takes *Chhandovatī* as *Sa* (tonic) but considers that “*Prasūnā*”, Nārada’s first *shruti*, corresponds to *Kshobhinī*. On the other hand, Govinda in his *Sangīta Shāstra-sankshepa* (c. eighteenth century) places the tonic *Sa* on *Kshobhinī*.

The *shruti*-s given by Shārṅgadeva are as follows:

“*Tīvrā*, *Kumudvatī*, *Mandā*, *Chhandovatī* come within *Shadjā*;

Dayāvatī, *Ranjanī* and *Raktikā* dwell in *Rishabha*,
Raudrī and *Krodhā* in *Gāndhāra*,

While the *shruti*-s *Vajrikā*, *Prasārinī*, *Prīti* and *Mārjanī* have their place in *Madhyama*.

Kshitih, *Raktā*, *Sandīpanī* and *Alāpinī* are in *Panchama*;
Madantī, *Rohinī*, *Ramyā* shelter in *Dhaivata*;

Both *Ugrā* and *Kshobhinī* rest in *Nishāda*.” (*Sangīta-ratnākara*, 1, 3, 35-39.)

I formerly followed the often admitted interpretation that starts the scale from *Kshobhinī*, but closer study of the expressions given by Shārṅgadeva seems to show beyond doubt that his scale starts from *Chhandovatī*, as seen in the following tables.

Note	Actual expression	Ratio from C	Shārngadeva's Shruti-s (Type of expression— Jāt-s)

			(measuring)	

The expression of a mode is the sum of the expressions of its different notes, defined by their relationship to the tonic. In each *rāga*, each of the different notes is attributed a definite meaning.

The expressions given in our notation for each note of each *rāga* have been compiled experimentally and verified over and over again, players and listeners always agreeing on the meaning of the notes.

There may, however, remain some inaccuracies in the accidental *shruti*-s used for particular notes in melodic figures. There are also other schools which hold different views on the expressive interpretation of the *rāga*-s. Only a very extensive comparison of the practice of different musicians would allow us to correct and perfect every detail in the use of the accidental *shruti*-s appearing in each *rāga*.

Some *rāga*-s have peculiarities in their scale or their tuning that modify their expression.

According to the theoretical explanation of the *shruti*-s, all the notes cannot have the same kind of expression and in a scale, therefore, there are necessarily contrasts. This is why the most intense *rāga*-s should be pentatonic, since in a pentatonic scale it is easier to eliminate the notes that would not support the predominant expression.

A very sad *rāga* will leave out the fifth (Pa) because a fifth always expresses sunshine, joy. A very passionate *rāga* will have no natural fourth (shuddha Ma) since that always expresses peace, serenity.

These contrasts between the notes provide a further reason why the *rāga*-s which were considered masculine in ancient music were always pentatonic, for a pentatonic scale can give a stronger and more coherent expression than a heptatonic scale which necessarily shows contrasts, indecisions, subtleties, and seems thus more feminine in character.

When sounds are used for creating ecstasy or for the treatment of mental or physical disease, the number of notes may be further reduced to a few sounds constantly heard, so as to create an overwhelming impression pulling in one direction only.

A Suggested Interpretation of the Families of Intervals
(*Shruti-Jāti-s*)¹

The scale of the *shruti-s*, as we here interpret it, is composed of several series of fifths, related to one another by harmonic thirds. Starting from C (Sa), we build five successive ascending fifths and five successive descending fifths. This gives us the series of intervals, generally known as Pythagorean.

The five ascending fifths are G D A+ E+ B+

The five descending fifths are F B $\flat$ E $\flat$ A $\flat$ D $\flat$

If now, starting again from C, we descend by a harmonic minor third (6/5), this gives us the A (Dha) which forms a sixth (5/3) with the lower C, and which is lower by one comma (81/80) than the Pythagorean sixth A+ (Dha+) = 27/16 which we obtained before.

If we build up ascending and descending fifths starting from this harmonic A, they will all naturally fall one comma below those of the basic series. This new series gives us E B F $\sharp$ D $\flat$ etc.

If we again take the harmonic minor third below A, we obtain F $\sharp$ - = 25/18, the basis of a series of fifths two commas below those of the original series, thus D $\flat$ - A $\flat$ - E $\flat$ - B $\flat$ -.

Starting again from C, if we ascend by a harmonic minor third to obtain the high E $\flat$ + = 6/5, the basis of a series of fifths, all one comma higher than those of the basic series, thus A $\flat$ + D $\flat$ + F $\sharp$ + B+.

Similarly, the harmonic minor third above E $\flat$ + gives F $\sharp$ ++ = 36/25, the basis of a series of fifths, two commas higher than those of the basic series, thus B++ E++ A++ D+.

Each of these series is based upon a particular type of ratio, and the notes of each series are seen to correspond to a definite type of emotion. Here there is a direct connection between intervals, determined by physical laws, and the emotions they arouse or express. This fact is the very foundation of music. Once we know the type of ratio that corresponds to a kind of emotion, we can tell at once what emotion a given interval must express by merely looking at the ratio to which it corresponds: we do not need to hear it.

¹ See the authors' *Sémantique Musicale*, Hermann Paris 1966.

Starting from $Sa (C) = 1/1$ which is neutral, the ascending fifths are all of the form $3^n/2^{n+1}$, i.e. ratios formed by 3 and its multiples divided by multiples of 2. Thus: $G (Pa) = 3/2$, $D (Ri) = 9/8 = 3^2/2^3$, $A+ (Dha+) = 27/16 = 3^3/2^4$, $E+ (Ga+) = 81/64 = 3^4/2^5$, $B+ (Ni+) = 243/128 = 3^5/2^7$.

These intervals represent an "active principle": they all express sunshine, strength and joy.

If we now take the descending fifths from $Sa (C)$, these are all of the form $2^{n+1}/3^n$. Thus $F (Ma) = 4/3 = 2^2/3$, $Bb (NiK) = 16/9 = 2^4/3^2$, $Eb (GaK) = 32/27 = 2^5/3^3$, $Ab (DhaK) = 128/81 = 2^7/3^4$, $Db (RiK) = 256/243 = 2^8/3^5$.

These intervals represent a "passive principle"; they all express moonlight, beauty, peace.

The expression in these two basic series has an unpersonal character. Their ratios never use a prime number higher than three.

In the next series a new element appears, the prime number 5. We shall discover that whenever 5 appears as a constituent of the numerator, the interval whose ratio is so expressed conveys tenderness (that is, passive reaction to the outer world). Whenever it appears as a constituent of the denominator, the interval whose ratio is so expressed conveys passion (active reaction to the outer world).

The basic interval of this series is $A (Dha) = 5/3$, which expresses sensitiveness, emotion. The ascending fifths will be $E (Ga) = 5/4 = 5/2^2$, $B (Ni) = 15/8 = 5 \times 3/2^3$, $F\# (MaT) = 45/32 = 5 \times 3^2/2^5$, $Db (RiK) = 135/128 = 5 \times 3^3/2^7$. They all show the same character, though the growing influence of $3/2$ will bring in its own element of activity.

The descending fifths $D- (Ri-) = 10/9 = 5 \times 2/3^2$, $G- (Pa) = 40/27 = 5 \times 2^3/3^3$, $C- (Sa-) = 160/81 = 5 \times 2^5/3^4$, $F- (Ma-) = 320/243 = 5 \times 2^6/3^5$ should add to the already receptive, sensitive character of the series. In musical practice the passive character of the descending fifth, when added to that of the number 5 in the numerator, gives intervals so extremely negative and characterless that they are rarely used in music.

The basic interval of the series + (plus) is $Eb+ (GaK+) 6/5 = 2 \times 3/5$ which expresses passion, desire. The ascending fifths built upon it add their activity to the already active character

produced by the number 5 in the denominator and thus create acute intervals which, except for the first one, where the element 2 does not appear, are rarely used in music

$$(B\flat)^+ (N_1K)^+ = 9/5 = 3^2/5, F^+ (Ma)^+ = 27/20 = 3^3/5 \times 2^2, \\ C^+ (Sa)^+ = 81/80 = 3^4/5 \times 2^4, G^+ (Pa)^+ = 243/160 = 3^5/5 \times 2^5)$$

The descending series, on the other hand, combining passion ($\frac{7}{5}$) and beauty (descending fifths), is lively and charming. Its intervals are $A\flat^+ (DhaK)^+ = 8/5 = 2^3/5$, $D\flat^+ (R_1K)^+ = 16/15 = 2^4/5 \times 3$, $F\sharp^+ (MaT)^+ = 64/45 = 2^6/5 \times 3^2$, $B^+ (Ni)^+ = 256/135 = 2^8/5 \times 3^3$

The five groups of sounds so obtained appear to correspond quite accurately to what was known in ancient Indian music as the *Shruti-jāti*-s, the families of intervals

Shārngadeva gives them the following ancient names

Madhyā (moderate) basic series ascending

Āyatā (large) basic series descending

Mṛīduh (tender) series -

Karunā (pathetic) series - -

Dīptā (fiery) series +

The expression conveyed by these different classes of intervals is in no way arbitrary. It is related to psycho-physiological facts upon which all music depends. These intervals are used in all music more or less instinctively, by good singers and players of stringed instruments

I

Descending fiftha (passive 2/3)

-1	P (Nn)	$4/3 = 2^2/3$	moonlight, peace, passivity (white)
-2	Bp (Nik)	$16/9 = 2^4/3^2$	beauty, loveliness
-3	Bp (OnK)	$32/27 = 2^5/3^3$	tender, loving, expectant

Flats and Sharps

All the notes that differ from the seven notes of the basic scale are considered altered. Since there are several intermediary sounds between two notes, the alterations are of different kinds.

"When a note rises by one interval (*shruti*), it is called *tīvra* (sharp). If it rises by a further *shruti* it becomes *tīvratara* (very sharp). If the note rises by still one more *shruti*, it becomes *tīvratama* (extremely sharp), and when it is raised by four *shruti*-s, the sages say that it takes the name of *ati-tīvratama* (extra extremely sharp).

"If a note is lowered, it is called *komala* (flat); when it is lowered by one *shruti* it is *komala*, but if it is lowered by two *shruti*-s it is called *pūrva*." (*Pūrva* is now called *ati-komala*.) (*Sangīta-pārijāta*, 68-71.)

In most cases, this means that a note raised by a minor half-tone ($25/24$) is said to be sharp (*tīvra*), by a limma ($256/243$) "very sharp" (*tīvratara*); by a major half-tone ($16/15$) "extremely sharp" (*tīvratama*).

Similarly, a note flattened by a half-tone equal to one *shruti* (usually the minor half-tone, $25/24$), is said to be *komala* (flat) and when it is flattened by a larger half-tone (the limma, $256/243$, or the major half-tone, $16/15$) it is said to be *ati-komala* (extremely flat).

Since this classification, though exact, may sometimes be misleading because of the different intervals represented by the *shruti*-s, we shall use here only the more general terms *komala* (flat) and *tīvra* (sharp); the tuning symbol, and the notation itself, will show which sort of flat or sharp is being used.

The classification of the *shruti*-s in Southern Indian music does not conform to these definitions. It appears that the reformers of the music of South India in the seventeenth and eighteenth centuries re-interpreted the theory of the *shruti*-s according to a particular system and this was introduced in musical practice. The North Indian musicians seem to follow the more ancient conception.

The Scale

The scale (grāma) is the assemblage of the notes" (*Sangita makaranda* 1 49, *Sangita ratnākara*, 1, 4 1, *Sangita darpaṇa*, 1 95)

A scale is not a group of sounds arbitrarily chosen. The building of any scale involves physical laws and a co-ordination of the *shruti*-s which are necessarily respected.

If we take the most consonant intervals, those composed of simple ratios involving prime numbers not higher than 5, to fill each of the tetrachords, we obtain the basic harmonic scale of seven notes

C	D	E	F	G	A	B	C
$\frac{1}{1}$	$\frac{9}{8}$	$\frac{5}{4}$	$\frac{4}{3}$	$\frac{3}{2}$	$\frac{5}{3}$	$\frac{15}{8}$	$\frac{2}{1}$
$\frac{1}{1}$	$\frac{8}{8}$	$\frac{4}{4}$	$\frac{3}{3}$	$\frac{2}{2}$	$\frac{3}{3}$	$\frac{8}{8}$	$\frac{1}{1}$
Sa	R ₁	Ga	Ma	Pa	Dha	N ₁	Sa

There is, however, an alternative division. This consists of substituting for E (Ga) $\frac{5}{4}$ and B (N₁) $\frac{15}{8}$, E $\flat$ + (Ga komala) $\frac{6}{5}$ and B $\flat$ + (N₁ komala) $\frac{9}{5}$ respectively. This gives the scale

C	D	E $\flat$ +	F	G	A	B $\flat$ +	C
$\frac{1}{1}$	$\frac{9}{8}$	$\frac{6}{5}$	$\frac{4}{3}$	$\frac{3}{2}$	$\frac{5}{3}$	$\frac{9}{5}$	$\frac{2}{1}$
$\frac{1}{1}$	$\frac{8}{8}$	$\frac{5}{5}$	$\frac{3}{3}$	$\frac{2}{2}$	$\frac{3}{3}$	$\frac{5}{5}$	$\frac{1}{1}$
Sa	R ₁	GaK	Ma	Pa	Dha	N ₁ K	Sa

If both scales are taken together, we obtain the basic scale of nine notes as it was used in ancient Northern Indian music.

These divisions form the Diatonic divisions of the scale, so called because each tetrachord contains two whole tones.

There is another division, however, known to the Greek theorists as the Chromatic, which forms the basic scale of Southern Indian music. In this scale each tetrachord contains two semi-tones and one minor third.

	C	D $\flat$ +	D	F	G	A $\flat$ +	A	C
	$\frac{1}{1}$	$\frac{16}{15}$	$\frac{9}{8}$	$\frac{4}{3}$	$\frac{3}{2}$	$\frac{8}{5}$	$\frac{5}{3}$	$\frac{2}{1}$
	$\frac{1}{1}$	$\frac{15}{15}$	$\frac{8}{8}$	$\frac{3}{3}$	$\frac{2}{2}$	$\frac{5}{5}$	$\frac{3}{3}$	$\frac{1}{1}$
Northern Indian	Sa	R ₁ K	R ₁	Ma	Pa	DhaK	Dha	Sa
Southern Indian	Sa	R ₁	Ga	Ma	Pa	Dha	N ₁	Sa

In this system the two additional notes Antara Ga and Kākalī N₁, E (Ga) $\frac{5}{4}$ and B (N₁) $\frac{15}{8}$, give the complete scale of nine notes.

	C	D $\flat$	D		E	F	G	A $\flat$	A		B	C
	$\frac{1}{1}$	$\frac{16}{15}$	$\frac{9}{8}$		$\frac{5}{4}$	$\frac{4}{3}$	$\frac{3}{2}$	$\frac{8}{5}$	$\frac{5}{3}$		$\frac{15}{8}$	$\frac{2}{1}$
Northern Indian:	Sa	Rik	Ri		Ga	Ma	Pa	Dhak	Dha		Ni	Sa
Southern Indian:	Sa	Ri	Ant.Ga		Ga	Ma	Pa	Dha	Kāk,Ni		Ni	Sa

This scale does not concern us here since it is never used as a basic scale in Northern Indian music. It may, however, be related to one of the ancient *grāma*-s.

The Sanskrit books do not generally define notes by string-lengths but rather by their expression, their *shruti*, which is the easiest way for trained musicians to recognize them.

The *Sangita-parijāta* and the *Hridaya-kautuka* attempt to give the relative string-lengths of the different notes.

The unaltered scale of modern Northern Indian music is the basic harmonic scale of seven notes. It is approximately the scale of *Rāga Bilāval*, and is usually known by this name. It corresponds approximately to the major mode of Western music. *Rāga Bilāval* was first accepted as the unaltered scale in the *Sangita-sāra*, compiled in Jaipur between 1779 and 1804, and in the *Nāgmat-e-Asaphi* of Muhammad Rezza in 1813.

In this scale the intermediary sounds are considered modifications of the seven main ones. These modifications are always conceived within the frame of the harmonic form of the chromatic scale in which each note can be altered only in one direction—either flattened or sharpened.

The harmonic form of the chromatic scale thus gives the twelve chromatic notes as follows:

It should be remembered that the altered (*vikrita*) notes, and also certain of the unaltered (*shuddha*) ones, are susceptible to slight changes of pitch according to their expression or *shruti*.

The division of the octave into twenty-two or sixty-six *shruti*-s corresponds to what the ancient Greeks called the enharmonic division. They considered this division, as the Hindus also did, the fundamental division of the scale. Besides this basic division there exist in Indian music—indeed in all

music—two main divisions of the octave—one (diatonic) into seven notes, the other (chromatic) into twelve. Matanga says

"Modal scales (*mūrca'hanā-s*) are of two kinds—the scales of seven notes and the scale of twelve" (*Bṛhaddeshī*, commentary on 1, 95)

The Three Basic Scales (Grāma-s)

' There are two scales—that of *Shadja* (C) and that of *Madhyama* (F). Some also mention the scale of *Gāndhāra* (E) which is not, however, to be found in this world (*Dattilam* 11)

Three basic scales or *grāma-s* corresponding to different tunings of the harp, were used in ancient music. Each was named after its main note (which was not necessarily its tonic). A difference in the tonic was not and could not be their essential difference, for each of the notes in these scales could successively be taken as starting-point, thus forming plagal scales or *mūrca'hanā-s* which were further used as the basis of the modes. As we have already seen, the two main basic scales, the harmonic and the Pythagorean, are differentiated by the raising or lowering of the sixth note, the A (Dha) (ancient Panchama) by one comma. This is also the differentiation made in the *Nāṭya Shāstra* between the two main ancient basic scales, the *Shadja* and *Madhyama grāma-s*. For the ancient Hindus, the main scale seems to have been the one we call Pythagorean in Indian music; it is called *Shadja grāma*, or scale of C.

The second or harmonic scale was formed by lowering the A+ (Dha+) (ancient Pa) into A (Dha). This was known as the *Madhyama grāma*, or F scale.

The third basic scale known in ancient times, but already obsolete in the time of Dattila, was called *Gāndhāra grāma*. In the texts its nature is never explained in sufficient detail. It may have been the South Indian Chromatic.

The *Ga grāma* (scale of E, modern scale of F, Ma) was said to start from Pa (modern A, Dha).

"The modal scale (*mūrca'hanā*) of *Shadja grāma* is Sa, R₁, Ga, Ma, Pa, Dha, N₁

"The modal scale of *Madhyama grāma* is Ma, Pa, Dha, N₁, Sa, R₁, Ga

"The modal scale of *Gāndhāra grāma* is Pa, Dha, N₁, Sa, R₁,

Ga, Ma." (*Sangīta-dāmodara*, 1, 40-41.)

The classification of the *grāma*-s has in practice, since medieval times, been abandoned. All the scales have since become modifications of the one *Shadja grāma*, particularly as the note *Shadja* itself became the universal tonic and the basic notes of the *grāma*-s were taken as their tonic. Hence:

"All worldly music (*deshī*) comes from the *Shadja grāma*." (*Svaramela-kalānidhi* 5, 17.)

"The basic scales (*grāma*-s) formed by the different arrangements of the *svara*-s are said to be three. They are known by the names *Shadja* (C), *Madhyama* (F) and *Gāndhāra* (E). They are the basis of modal scales (*mūrcha*'*hanā*-s) and the *Shadja grāma* is the most perfect of the three. The modes obtained in the two other *grāma*-s are derived from the *Shadja grāma*." (*Ahobala, Sangīta-pārijāta*, 97-98.)

"The *Gāndhāra* and *Madhyama grāma*-s are considered to be no longer in use. Their definitions are given only so that they may not be mistakenly reinvented." (*Rāga-tattva-vibodha*.)

In fact the *grāma*-s correspond to the different tunings of the ancient harp. The harp was replaced after the sixth century by instruments of the lute type. The various modal scales depend on the lute on the arrangements of the frets and no longer on a basic tuning of the instrument. The classification of the *grāma*-s therefore lost its purpose.

"The modal scales begin from C (Sa) in the middle octave." (*Shiva-tattva-ratnākara* 6, 7, 47.)

The three notes chosen as the starting-points of the three *grāma*-s—C G F (Sa Pa Ma)—are never altered by one comma in modal music, as are all the other notes of the scale. These three, therefore, are fixed points in all scales and no confusion can arise when intervals are measured in relation to them. Matanga makes the following remark concerning the two of them:

"Why is it that the basic scales (*grāma*-s) are called by the names of *Shadja* (C) and *Madhyama* (F)? They are so called because these two notes are never altered. It is because they are never altered that they are said to belong to the kin of the Gods." (*Brihaddeshī* commentary on 92; also quoted by Simhabhūpāla, commentary on the *Sangīta-ratnākara* 1, 4, 6-8.)

Modal Scales (*Mūrch'hanā-s*)

'That which spans (*mūrcha*) the scale of a mode is called *mūrch'hanā*' (*Bṛhaddeshī* 94)

The term *mūrch'hanā* (modal scale) was used in medieval music for the different types of scales from which the modes are derived. There are three main types of such scales, thus three kinds of *mūrch'hanā-s*

(1) The first use of the word *mūrch'hanā* refers to the classification of modes as plagal forms of the basic scale. This method of classification, which was probably of Greek origin, has in practice never completely replaced the "scale-types" or *thāla-s* of the Shivaite system still used by the musicians.

"The sequence of the seven notes in ascent or descent is called *mūrch'hanā*. There are seven in each of the two basic scales" (*Sangīta-makaranda*, 1-66, reproduced in *Chatvārim-shach'hata-rāga-nirūpanam*, 1, 22, *Sangīta-ratnākara*, 1, 4, 9, and *Shiva-tattva-ratnākara*, 6, 7, 32-33)

(2) The name *mūrch'hanā* was also, in another system, given to the chromatic scale of twelve notes.

"The modal scale (*mūrch'hanā*) should be known to the wise as having twelve notes from which modal types can be built and melodies in the high as well as the low octave" (Nandī-keshvara quoted in *Bṛhaddeshī*, commentary on 118, and by Śimhabhūpāla, commentary on the *Sangīta-ratnākara*, 1, 4, 15-16)

(3) The term *mūrch'hanā* was further used for pentatonic, hexatonic, heptatonic and eight- or nine-note scales. This division is now usually known as *jāti*:

"The *mūrch'hanā-s* born of the seven notes are of four kinds: complete (heptatonic, *pūrṇa*), hexatonic (*shāḍava*), pentatonic (*audava*) and intercalary (*sādhārana*). In singing, a scale of seven notes is considered the complete scale (*pūrṇa*), a scale of six notes is called *shāḍava*, a scale of five notes *audava*, a scale of eight or nine notes, making use of the intercalary notes *Kākalī Nī* (B₄) and *Antara Gā* (E₄), is called 'intercalary' (*sādhārana*)" (*Bṛhaddeshī*, commentary on 1, 95)

The word *mūrch'hanā* is sometimes used in modern music, mostly by professional Mohammedan musicians, to designate melodic ornaments in the form of the mordents *tiripā* and *spūrita* (~ or ~), more often called *hīllola* or *gīlīrī*:

Class (*Jāti*)

The Indian scale is divided into seven regions or sections ruled by the seven notes, or *svara*-s, of the diatonic scale and named after them.

As we have already seen, the mode is called "complete" (*sampūrṇa*) if one or more notes be used from each division in any mode. But if one division is not represented, whatever the number of notes in the other divisions, the mode is called hexatonic (*shādava*). If two divisions are not represented the mode is pentatonic (*audava*).

The classes obtained by grouping the modes according to the number of their notes are sometimes known as *jāti*-s. This term is still in use in the Eastern part of Northern India.

"Class (*jāti*), in *rāga*-s, is considered to be of three kinds—*audava* of five notes, *shādava* of six, *sampūrṇa* (complete) of seven notes." (*Nārada Samhitā* 2, 60; *Sangīta-darṇana* 2, 6.)

Melodies comprising less than five notes cannot be called *rāga*-s (modes), but are mere "melodic figures" (*tāna*-s).

"Combinations of two or three or four pleasing notes form melodic figures (*tāna*-s): a *rāga* must have five or more [notes]." (*Hridaya-prakāsha*.)

Besides the three *jāti*-s, there are modes which, in addition to the main seven, make use of one or both of the two intercalary notes *Kākalī Nī* and *Antara Ga*. In ancient music these eight- or nine-note modes were known as the "intercalary modes" (*sādhārana*).

Though Vishnu Digambar in his *Sangīta Tattva Darshaka* does not use the term *jāti*, he restates the ancient classification, adding the three kinds of *rāga*-s mentioned by Umāpati (quoted in *Rāga-vibodha*, commentary on 4, 3) and also by Matanga (mentioned by Kallinātha and quoted in *Sangīta-darṇana*, 2, 5). These are called: *shuddha* (pure), *chhāyā-laga* (shadowed) and *sankīrna* (mixed).

They are defined as follows:

A *rāga* in which there are only unaltered notes is called "pure" (*shuddha*).

A *rāga* is called "shadowed" (*chhāyā-laga*) when it makes use of a few notes borrowed from another *rāga*, provided they do not alter the mood, but, on the contrary, enhance it.

A mixture of several *rāga*-s is called *sankīrna*.

"According to Umāpati, a 'pure' *rāga* charms by itself, a 'shadowed' *rāga* with the help of others, a 'mixed' *rāga* with the help of two" (*Rāga-vibodha*, 4, 3)

"Sampūrṇa" means "complete", "shādava" means "of six" The word "audava" has given rise to some speculation Fox-Strangways, for example, in his *Music of Hindostan* (p 122) suggests that it may have come from the name of a province where the pentatonic scale was invented But the *Sangīta-darpana* (commentary on 2-6), clearly explains the term

"The derivation of the word 'audava' is as follows Udava is where the planets move, hence the 'sphere of space' (vyoma) This is the fifth (space in Indian philosophy is a quality of ether) among the elements, thus it represents the number 5 From this it is clear that the number of notes of the *audava* (the ethereal scale) is five "

A similar explanation is given in the *Shiva-tattva-ratnākara*

There are rules for the use of the *jāti*-s, in accordance with the symbolism of numbers

"For celebrating battle, charm and beauty, in separation, or in depicting a character, the hexatonic (shādava) [class of modes] is recommended

"For destroying disease or enemies, dispelling fear or sorrow, in difficulty or in suffering, in forgiveness or when planets are unfavourable, auspicious words should be sung in the pentatonic scale" (*Shiva-tattva-ratnākara*, VI, 145-147)

The term *jāti* was also used in ancient and medieval music for mode-types

"The intervals (shruti-s), the initial note (tonic, graha) and the other notes (svara-s) combine to produce the resultant modal type, therefore they are called 'jāti-s' (results)" (*Bṛhaddeshī*, commentary on I, 194)

"Jāti" in this sense has now been replaced by the term "thāta"

Mode-Types (Thāta-s)

Indian music, like Greek, Iranian and Arab music, divides the scale into two tetrachords or groups of four notes, ruled respectively by the "sonant" (vādī) and the "consonant"

(samvādi): the lower tetrachord C D E F (Sa Ri Ga Ma) is called *pūrvāṅga* (first limb), the higher tetrachord G A B C (Pa Dha Ni Sa) *uttarāṅga* (higher limb). This is not an artificial division but corresponds to a physical fact, for, as we have said, there is great similarity of expression between the corresponding notes of the two tetrachords. In many *rāga*-s the division of the two tetrachords is identical.

In analysing each *rāga* we shall give the different intervals that arise between the notes of each tetrachord, together with their ratios.

Indian music envisages six main types of tetrachords spanned by a perfect fourth, and six secondary types spanned by an augmented fourth. These are obtained in the following ways:

If we take the twelve notes of the chromatic harmonic scale and divide them into lower and upper tetrachords (leaving between them F#, Ma tīvra), we see that in each case six different types of tetrachords are available:

If we combine each of the possible lower tetrachords with each of the possible higher ones, we obtain thirty-six different scales of seven notes. If we then replace F (Ma) by F# (Ma tīvra) in each of these thirty-six scales, we obtain thirty-six further scales. The total number of theoretically possible basic scales is thus seventy-two. This classification is used in South India where such scales are called *mela*-s or *melakartā*-s. Its theory is explained by Pandit Venkata Makhin, the seventeenth-century systematizer of Southern Indian music who, in the fourth chapter of his *Chaturdandī-prakāśhikā*, claims to have invented this system of classification though it is really an ancient system already mentioned in the *Sangīta-sāra* of Vidyāranya (1320-1380).

The term "mela" can, however, be used for any melody-type.

"A mela is a group of sounds from which *rāga*-s (modes) will be made manifest " (*Sangīta-pārijāta*)

The artificial classification of the *mela*-s—musically inexact, for it neglects the differences in the *shruti*-s—merely helps the player to remember the approximate tuning of a mode

Many of the scales obtained by this system are not in use in Northern music, and this type of classification is only used in Southern India. In North India the modal bases are represented by a small number of mode-types or *thāta*-s (usually ten) which correspond to the approximate placing of the frets on the sitar

The *Rāga-vibodha* says (commentary on 1, 8)

"The particular arrangements of the notes (*svara*-s) into common scales (*mela*-s) under which modes (*rāga*-s) can be grouped, are spoken of as 'ghāta-s' (or *thāta*-s) "

These "thāta-s" or mode-types should not be mistaken for the *rāga*-s or modes that bear the same names, for the latter may have more or fewer notes and an accurate tuning, whereas the tuning of the mode-types is only approximate

The ten *thāta*-s or mode-types are given as follows

"The first is *Kalyāṇi* (*Kalyāṇa*) mela, the second *Velāvali* (*Bilāval*), the third *Khammāja*, the fourth *Bhairava*, the fifth *Bhairavi*, the sixth *Āsāvari* (our *Yāvanapūri*), the seventh *Todī*, the eighth *Pūravi* (our *Shrī*), the ninth *Māravā*, the tenth *Kāfi*

"Such are the ten mode-groups (*mela*-s) from which *rāga*-s arise " (Quoted in *Shrīmāllakshya-sangītam*, II, 1, 19-21)

The *thāta*-s are as follows

I	<i>Kalyāna</i>	
II	<i>Bilāval</i>	
III	<i>Khammāja</i>	
IV	<i>Bhairava</i>	
V	<i>Bhairavī</i>	
VI	<i>Yāvanapūrī</i> (Bhātkhande's Āsāvārī)	
VII	<i>Todī</i>	
VIII	<i>Shrī</i>	
IX	<i>Māravā</i>	
X	<i>Kāfī</i>	

The eighth *thāta*, *Shrī*, is given by Bhātkhande as *Pūravī*, but since the *Pūravī* in some traditions, such as the one we follow here, has an A natural (shuddha Dha), its name could not be given to a *thāta* containing an A flat (Dha komala). There is no divergence of opinion about the scale of *Shrī*.

Group

Some of the main *rāga*-s have, as their satellites, secondary modes with the same general characteristics and only minor differences. These are said to belong to the group of their parent *rāga*-s. For example, *Prabhāt*, *Bangāla*, *Rāmakalī*, etc., belong to the *Bharrava* group.

Some books consider the chief modes as masculine in character and call them "*rāga*-s", while the secondary modes, the "*rāginī*-s", are said to be their wives or even their "sons" (putra-s).

The male *rāga*-s, originally all pentatonic scales, are usually considered to be six in number, though some treatises mention seven, eight, or nine.

"*Bharrava*, *Mālakosha*, *Hindola*, *Dīpaka*, *Shrī rāga* and *Megha rāga*, these are the male *rāga*-s" (*Sangīta-darpana* and *Shiva-tattva-ratnākara*, 6, 8, 44)

The *Sangīta-makaranda*, however, speaks of twenty-one male *rāga*-s (3-53, etc.)

Graha, Amsha, Nyāsa

In ancient music, three notes are referred to under the names of *amsha*, *graha* and *nyāsa*.

"The note with which a *rāga* begins is called 'graha'. By 'nyāsa' is understood the note that ends a song. The note most often used while playing is called 'amsha'." (*Sangīta-darpana*, 163)

The use of the terms *graha* and *amsha* is a little confusing, for their meaning is variously interpreted by authors of different periods. Some understand the "initial note" (*graha*) to be the first note of the mode, that is, the tonic, others consider it to be the first note of a melody, which may well be any note. But this last interpretation seems hardly justified.

Similarly the "main note" (*amsha*) is taken to mean sometimes the tonic and sometimes the predominant note, the "sonant" or *vādī*. The more ancient authors seem to have used the word in the first sense. Thus the *Nāṭya Shāstra* explains the word *graha* as being synonymous with *amsha* and meaning the tonic.

"In all the modal scales the initial note (*graha*) is equivalent

to the main note (i.e. the tonic). The whole music takes its significance from this main note (*amsha*) which is the same as the initial note (*graha*).” (*Nāṭya Shāstra*, 28, 71; also quoted in *Bṛhaddeshī*, comm. on 197.)

The *Bṛhaddeshī* also uses the term “*amsha*” (main note in the sense of “tonic” (basic note, *Sa*):

The main note by relation with which a mode, a *rāga*, is manifested is the *amsha* (i.e. the tonic, *Sa*).” (*Bṛhaddeshī*, somm. on 1, 196.)

“This *amsha-svara* is the vital note (*Jīva-svara*, the tonic).” (*Chaturdandī-prakāśhikā*.)

In the later music “*Sa* (C) is the initial (*graha*, i.e. the tonic) of all the *rāga*-s.” (*Rāga-mālā*.)

But *Shārngadeva*, on the other hand, identifies the “*amsha*”, the main note, with the “sonant”, the *vādī*:

“Because it is most used during a performance, the *vādī*: (sonant) is called *amsha* (main note).” (*Sangīta-ratnākara*, 1, 7, 34.)

This is also the view of *Abhinava Gupta* given in his commentary on the *Nāṭya Shāstra*:

“The *amsha svara* is the same as the *vādī*.” (*Abhinava Gupta*, comm. on the *Nāṭya Shāstra*, 28, 23.)

“The (note) that is most used is also called *amsha*.” (*Bṛhaddeshī*, comm. on 1, 196.)

Yet the *Nāṭya Shāstra* definitely considers the *amsha* as the tonic.

“The structure of the mode entirely depends on the *amsha* (tonic), from which it begins, which separates the high and low octaves, and from which its expression is derived. The *amsha* is, further, the initial and final note (*graha* and *nyāsa*), the phrase-final, part-final, and general-final note (*apanyāsa*, *vinyāsa*, *sannyāsa*), the centre round which the mode revolves. These are its ten characteristics.” (*Nāṭya Shāstra*, also quoted by *Kallinātha*, *Sangīta-ratnākara*, comm. on 1, 7, 29-34.)

The Predominant Note or Sonant (Vādī)

“The sonant (*vādī*) is the king of notes.” (*Sangīta-makaranda* 2-7).

Besides the tonic (the *Sa*) which is always fixed, each *rāga* has a predominant note from which all variations begin and

on which they end it is always accentuated and bears long pauses. This main note is called *vādī* (that which speaks). The expression of the *vādī* is the predominant expression of the *rāga*; its character determines the mood.

"The chief element in which the power lies of bringing out a particular mood, a *rāga*, is the sonant (*vādī*)" (*Sangita-darṣana*, 1-68)

"The sonant (*vādī*) is the note most used while playing, it is the king (of the melody)" (*Rāga-vibodha*, 1, 37)

The commentary on the *Rāga-vibodha* adds "the sonant (*vādī*), being constantly heard, dominates the melody. Because it explains and heralds the mode, it is called *vādī*, (that which speaks)"

The "Consonant" (*Samvādī*)

The consonant is like a minister (*Sangita maharanda* 2, 7)

Corresponding notes in the two tetrachords into which the octave is divided always have similar expressions. Another note a fourth or a fifth above the *vādī* will therefore be found that responds to it, playing in the upper tetrachord a similar, though secondary role. This note is called "*samvādī*" (consonant)

"The nature of the 'consonant' (*samvādī*) is to reinforce the 'sonant' (*vādī*) by which the expressiveness of the mode is engendered" (*Bṛhaddeshī*, comm on 1, 63)

Very rare exceptions apart, the *samvādī* is always a fifth or a fourth above the *vādī*. This corresponds to an interval of twelve or eight *śruti*-s

"The notes that have between them an interval of twelve or eight *śruti*-s (perfect fifth and fourth) are called 'consonant' (*samvādī*). They are like ministers" (*Rāga-vibodha*, 1, 37)

The commentary adds "The *samvādī* sustains the impression created by the *vādī*, just as ministers carry out the order of the king"

"The notes between which there are eight *śruti*-s (perfect fourth) or twelve *śruti*-s (perfect fifth) are said, in relation with one another, to be consonant (*samvādī*). Such are *Nī* and *Gā* (B and E) or *Rī* and *Dhā* (D and A)" (*Sangita-darṣana*, 1, 69-70)

Rāga-s in which the *samvādī* is a fifth above the *vādī* are

called "panchama samvādī" (having a fifth as main consonance); those in which the *samvādī* is a fourth above the *vādī* are called "madhyama samvādī" (having a fourth as main consonance). *Panchama samvādī rāga*-s have a clear, active, brilliant expression; *madhyama samvādī rāga*-s are passive, dormant, and soft.

The Assonant (Anuvādī)

"The 'anuvādī' is like a servant." (*Sangīta-makaranda* 2-7.)

The notes of a mode that are neither "sonant" nor "consonant" are called "assonant" (*anuvādī*):

"By those who see the subtle cause of things the note that is neither the sonant nor the consonant and yet is not 'dissonant' (*vivādī*) is called assonant (*anuvādī*)."
(*Sangīta-pārijāta*, 81-83.)

The Dissonant (Vivādī)

"Dissonant (*vivādī*) notes are enemies." (*Sangīta-makaranda* 2-7.)

Notes that do not belong to a *rāga*, or, if they do, are used in defiance of its rules are called "dissonant" (*vivādī*): They destroy the expression.

"That which in a given mode breaks the charm is undoubtedly 'dissonant' (*vivādī*) from the notes of that mode. . . This *vivādī* is like an enemy." (*Sangīta-pārijāta*, 83-84.)

"Melodic variations that would introduce a *vivādī* note should always be avoided."

CHAPTER III

RHYTHM

Tempo (Laya)

“There are three tempos—fast, medium and slow.” (*Dattilam*, 151)

INDIAN music, theoretically, knows three main tempos (*laya*), each being twice as quick as the previous one. These tempos are:

Vilambita (slow), in which each beat (*tālī*) is said to last about one second (♩ = 60).

Madhya (medium), in which each beat is said to last about half second (♩ = 120).

Druta (fast), in which each beat is said to last about quarter second (♩ = 240).

The rhythmic beats, in the order of their duration, bear the following names:

<i>Chandasra</i>	4 <i>mātrā</i> -s (units)	o
<i>Guru</i> (long)	2 „	♩
<i>Laghu</i> (short)	1 „	♩
<i>Druta</i> (fast)	1/2 „	♩
<i>Anu-druta</i> (atom-fast)	1/4 „	♩
<i>Anu-anu-druta</i>	1/8 „	♩

In a more ancient system (see Svarup: *Theory of Indian Music*, p. 106) the *mātrā*, or time-unit, is said to be the shortest time in which a syllable can be pronounced. The normal human pulse-beat lasts three *mātrā*-s. The usual musical beat, or clap of the hand, is then called *laghu* (short) and is said to last from 3 to 9 *mātrā*-s (usually 4).

The time-divisions, according to this system, are as follows

- ♪ *Laghu* (short) lasts 4 *mātrā*-s
- ♪ *Drula* (fast) lasts 2 *mātrā*-s
- ♪ *Kalā* (portion) (or *Anudruta*, or *Anu*, or *Virāma*) lasts 1 *mātrā*

Nimisha (wink) = 1/8th of a *mātrā*

Kāshtha (limit) = 1/8th of a *Nimisha*

Lava (fragment) = 1/8th of a *Kāshtha*

Kshana (instant) = 1/8th of a *Lava*

♪ *Guru* (long) = 8 *mātrā*-s

♪ *Pluta* (extended) = 12 *mātrā*-s

o *Kākapada* (crow-foot) = 16 *mātrā*-s

The tempos, like the scales, are connected with moods

"In a laughing or a loving mood use a moderate tempo, in disgust and fear, a slow one, in the heroic mood, in wrath and in wonder, a fast tempo" (*Viṣṇu-dharmottara*, 3, 18)

Rhythm (Tāla)

"The arising, enduring and disappearance of the three worlds come from rhythm (*tāla*) From the worm onward, all animals move by rhythm All works in the world depend on rhythm It is by rhythm that the sun and the planets move" (Quoted in *Rāga-kalpa-druma*)

'Song dance and the playing of instruments depend upon rhythm (*Saṅgita-ratnākara* 5 2, *Śhiva-tattva-ratnākara* 6, 9 1)

Indian music uses a large variety of rhythms or "*tāla*-s"

"The syllable 'ta' represents *Shankara* (*Śhiva*) the 'Giver of Happiness', the syllable 'la' the 'Lady of the Mountain' (*Pārvatī*) Rhythm is called '*tāla*', because it is the union of the First Principle (*Śhiva*) and his Energy (*Shakti* = *Pārvatī*) *Śhiva* and *Shakti* being its very nature, rhythm (*tāla*), one with the life-breath, is meritorious, leads to fame, gives enjoyment and Liberation and so is cherished by Yogis" (Quoted in *Rāga-kalpa-druma* and in *Śhiva-tattva-ratnākara*, 6, 9, 3, in the latter the first two sentences only)

In the *Ālāpa*, the first exposition of the theme in slow tempo, there is no complex rhythm, though there are metric units (*mātrā*-s). Rhythmic formulae will be introduced only when, after the *Ālāpa*, the development of variations requires a rhythmic system. The thematic notation of the *rāga*-s is necessarily based on the first exposition of the theme in the *Ālāpa* and cannot, therefore, use any definite *tāla*.

Mnemonic monosyllabic names (*bol*-s) representing the different strokes on the drums (*tablā* or *pakhāvaja*) are used to memorize the basic rhythms. For the *tablā*, these basic rhythms are called "thekā". The syllables used to represent the strokes on the large drum (*pakhāvaja*) differ from those for the *tablā*: they are called "thapiyā".

A rhythm, or *tāla*, consists of three elements—an initial beat called "sama", other beats called "tālī", and empty beats or rests called "khālī". The middle point of a *tāla* is called "visama".

The first beat of each *tāla* (the "sama") is usually marked x or 1, the subsequent beats ("tālī-s") are marked 2, 3, 4, etc., the empty beats or rests ("khālī-s") are marked o (or {).

Each of the equal time-units (represented here by distinct syllables) is called a *mātrā*.

The Main Rhythms (Tāla-s)

"The face is the main part of the body and the nose is the centre of the face. A song without rhythm is like a face without a nose."
(*Sangīta Ratnākara, Nādārtha Rāga mālā.*)

Tāla Dādarā 6/4

6 *mātrā*-s (time-units), one main beat
(*Tablā bol*-s).

*Syncopation*

"From the point of view of rhythm, the attack of the sound can be of three kinds 'on the beat' (sama), 'after the beat' (atita) and 'before the beat' (anāgata)

"When the rhythm follows exactly the same timing as the song (dance, instruments), etc., and the stroke (of the drum) comes together with the rhythmic clap of the hands, this is known as the attack 'on the beat' (sama)

"When the attack (of the note) in the song comes after the clap of the hand, this is known as 'after the beat' (atita)

"And when the note has a slight tendency to be attacked early, when the hand is just lifted to clap, this is known as the attack 'before the beat' (anāgata)" (*Sangita-sārāmṛta* (13th Chapter, p. 166, Madras ed.)

Played "after the beat", the note is said to express reluctance, doubt

Played "on the beat", the note expresses precision, soberness

Played "before the beat", the note is said to express joy, liveliness, vitality

CHAPTER IV

MELODIC DEVELOPMENT

Melodic Movement (Varna)

ALL types of melodic forms or their variations through which a scale can be developed are called "melodic movement" (varna). There are three possible elements in melodic movement—ascending, descending and keeping to the same note. A mixture of these three is said to form a fourth kind of melodic movement, called "wandering" (sanchāri).

"The action of singing is called 'melodic movement' (varna). It is of four kinds, defined as: level, ascending, descending and wandering." (*Sangīta-ratnākara*, I, 6, 1; *Sangīta-darpana*, I-160.)

"Holding the same note continuously is called *sthāyī* (level); the two others are as their names indicate: ascending is called *āroha*, descending is called *avaroha*; a melodic movement combining all these features is called *sanchāri* (wandering)." (*Sangīta-ratnākara*, I, 6, 2-3; *Sangīta-darpana*, I, 160-161; *Shiva-tattva-ratnākara*, 6, 7, 82.)

The "level" (*sthāyī*) melodic movement is also described as follows:

"Where there are many intervals, this is called 'level' (*sthāyī*) melodic movement. And when a motive begins and ends on the same note this is also 'level' (*sthāyī*)." (*Shiva-tattva-ratnākara*, 6, 7, 84-85.)

"The singing of verses on one note only is called *sthāyī* (level) melodic movement." (*Dattilam*, 98.)

Tāna-s (Melodic Figures)

"The 490,000,000 *tāna-s* are divided into three categories"
(*Nārada Samhita*, 2, 64)

Tāna-s are the melodic figures formed by combining the notes

"The weaving together of the notes forms the *tāna-s* (melodic figures)" (*Nārada's Shikshā*, 1, 2, 6)

Originally the word *tāna* meant "tone" and is used in that sense in some of the earlier treatises. The meaning changed, however, before the Christian era and since then it signifies melodic figures.

Melodic figures are divided into two categories, those belonging to only one mode and those belonging to several modes, the first being known as pure (*shuddha tāna-s*), the second as deceitful (*kūta tāna-s*). Since a difference in any of the notes brings a change of mode, only figures that make use of all the notes of a mode can be said to really belong to it. Thus the *shuddha tāna-s* are usually said to be identical with plagal forms of the scales (the *mūrch'hanā-s*).

"The *tāna-s* (melodic figures) are of two kinds—pure (*shuddha*) or deceitful (*kūta*). A pure *tāna* is that through which the form of one *rāga* only can appear, while a deceitful *tāna* is one through which the forms of two or more different *rāga-s* may appear because it is common to several. For some unknown reason the ancient writers have not explained the use (of the pure *tāna-s*) in practical detail. But all agree that their number is eighty-four. In the opinion of some, they are developed from the *mūrch'hanā-s* (plagal scales)" (*Chaturdandī-prakāshikā*).

"The melodic figures by which a mode, a *rāga*, can be developed the wise call *tāna-s* (extensions). They are defined as of two kinds—pure (*shuddha*) or deceitful (*kūta*). The secret of the definition of the *shuddha tāna-s* is not to be developed here, so I need not speak of them" (Quoted in *Shrīmallakshya-sangītam*).

The number of possible note-combinations that can be used to form melodic figures is theoretically very large.

"In each of the plagal scales (*mūrch'hanā*) there are five thousand and forty (possible) *kūta tāna-s*" (*Sangīta-ratnākara*, 1, 4, 33).

"In these fifty-six *mūrch'hanā*-s are counted 282,240 complete (pure) and deceitful (*kūta*) *tāna*-s." (*Sangīta-ratnākara*, I, 4, 34-35.)

In present-day music the word "*tāna*" is often used for ornament (*alamkāra*). These ornaments form groups of notes or small melodic figures that repeatedly recur. When similar *tāna*-s follow one another in ascending sequence this is called *āhati* (rolling).

E.g.

The same, descending, is called *pratyāhati* (rolling down).

Ascent and Descent (Aroha, Avaroha)

The determining element in a mode, its ordered succession of notes, often differs in the ascending and descending forms. For example, many modes are pentatonic (*audava*) or hexatonic (*shādava*) ascending, and heptatonic (*sampūrṇa*) descending. Some have one or two of their notes natural (*shuddha*) ascending, and flattened (*komala*) descending, and so on. But the true scale of a mode, that which defines its full expression, is always the descending scale. In all ancient modal systems, the scale runs downwards from the upper tonic (*Sa*): to define a mode by giving its ascending scale first is a comparatively recent practice. Ascending scales always have an exploratory character, while descending scales, in any music, allow greater precision and clearer differentiation and should therefore always be taken as the standard.

In those parts of India where archaic forms of speech and song have been preserved (as, for example, in some of the valleys of the Himalayas), songs and the playing of instruments always start from the upper tonic in a descending scale.

Alamkāra (Ornaments)

"A melody without ornament is like a night without moon, a river without water, a vine without flowers, or a woman without jewels."
(*Nāṭya Shāstra*, 29, 75.)

The *alamkāra*-s in the Indian systems are the melodic adornments, that is ornamental groups of notes, vocalisations, etc. They differ from the ornaments of notes, or *gamaka*-s, the

latter being the various ways of attacking and inflecting individual notes

"An ornament (*alamkāra*) is a combination of several 'melodic movements' (*varna-s*)" (*Sangīta-ratnākara*, I, 6, 3, *Śhiva-tattva-ratnākara*, 6, 7, 44)

The ornaments, now often confused with *tāna-s* (melodic figures), are vocalisations or groups of notes used to adorn the melody

Alamkāra-s are divided into four types, like the *varna-s* from which they are derived. The *sthāyī alamkāra-s* (or level ornaments) are simple vocalisings which return to the note from which they start or to its octave, the *ārohi* (ascending) ornaments lead from one note to another higher note, the *avarohi* (descending) ornaments lead from one note to a lower one, and the *sanchāri* (wandering) ornaments are elaborate vocalisations combining the previous ones

The *sthāyī* (level) *alamkāra-s* number seven

"The seven *sthāyī alamkāra-s* are *prasanna-ādi*¹ (beginning low), *prasanna-anta* (ending low), *prasanna-ādi-anta* (beginning and ending low), *prasanna-madhya* (low in the middle), then, *krama-rechita* (orderly gallop), *prastāra* (the expanded) and *prasāda* (the serene)" (*Śhiva-tattva-ratnākara*, 6, 7, 85-86)

In the *Bṛhaddeshī* (comm on I, 120) these are defined as follows

"*Prasanna-ādi* (beginning low) starts from below and ascends to the upper octave, thus

Sa Rī Ga Ma Pa Dha Nī Sa"
Do Re Mī Fa Sol La Sī Do

"*Prasanna-anta* (ending low) descends from above thus

Sa Nī Dha Pa Ma Ga Rī Sa"
Do Sī La Sol Fa Mī Re Do

"*Prasanna-ādi-anta* (beginning and ending low) is low in the beginning and the end and high in the middle, thus

Sa Rī Ga Ma Pa Dha Nī Sa Nī Dha Pa Ma Ga Rī Sa"
Do Re Mī Fa Sol La Sī Do Sī La Sol Fa Mī Re Do

"*Prasanna-madhya* (low middle) is low in the middle or high at the beginning and the end, thus

Sa Nī Dha Pa Ma Ga Rī Sa Rī Ga Ma Pa Dha Nī Sa"
Do Sī La Sol Fa Mī Re Do Re Mī Fa Sol La Sī Do

¹ The word *prasanna* ('pleasing') is used in music as a technical term synonymous with *mandra* ('low'). The word *mandra* ('low') is used for a pleasing (*prasanna*) sound (*Bṛhaddeshī*, comm I, 120)

The span of the three other *alamkāra*-s is either less or more than an octave, but their definitions in the *Shiva-tattva-ratnākara* are not clear.

Further "there are twelve ascending and twelve descending melodic figures used as *alamkāra*-s." (*Shiva-tattva-ratnākara* 6, 7, 94.)

Among them the wandering (*sanchārī*) *alamkāra*-s are the most numerous. "Seven are chiefly used by musicians. They are: *tāra-mandra-prasanna* (high-low-low), *mandra-tāra-prasanna* (low-high-low), *āvartaka* (whirlpool), *sampradāna* (gift), *vidhuta* (waved), *upalolaka* (rolling) and *ullāsita* (laughing)." (*Shiva-tattva-ratnākara* 6, 7, 96-98.)

In the *Shiva-tattva-ratnākara* (6, 7, 101) these are defined:

- (1) *Tāra-mandra-prasanna* (high-low-low) is like *prasanna-ādi*.
- (2) *Mandra-tāra-prasanna* (low-high-low) is like *prasanna-anta*.
- (3) *Āvartaka* (whirlpool):
Sa Sa Ri Ri Sa Sa Ri Sa; Ri Ri Ga Ga Ri Ri Ga Ri;
Ga Ga Ma Ma Ga Ga Ma Ga; etc.
Do Do Re Re Do Do Re Do; Re Re Mi Mi Re Re Mi Re;
Mi Mi Fa Fa Mi Mi Fa Mi; etc.
- (4) *Sampradāna* (gift):
Sa Sa Ri Ri Sa Sa; Ri Ri Ga Ga Ri Ri;
Ga Ga Ma Ma Ga Ga; etc.
Do Do Re Re Do Do; Re Re Mi Mi Re Re;
Mi Mi Fa Fa Mi Mi; etc.
- (5) *Vidhuta* (waved):
Sa Ga Sa Ga; Ri Ma Ri Ma; Ga Pa Ga Pa;
Ma Dha Ma Dha; etc.
Do Mi Do Mi; Re Fa Re Fa; Mi Sol Mi Sol;
Fa La Fa La; etc.
- (6) *Upalolaka* (rolling):
Sa Ri Sa Ri Ga Ri Ga Ri; Ri Ga Ri Ga Ma Ga Ma Ga;
Ga Ma Ga Ma Pa Ma Pa Ma; etc.
Do Re Do Re Mi Re Mi Re; Re Mi Re Mi Fa Mi Fa Mi;
Mi Fa Mi Fa Sol Fa Sol Fa; etc.

(7) *Ullāsita* (laughing)

Sa Sa Ga Sa Ga, R₁ R₁ Ma R₁ Ma Ga Ga Pa Ga Pa,
Ma Ma Dha Ma Dha etc

Do Do M₁ Do M₁, Re Re Fa Re Fa, M₁ M₁ Sol M₁ Sol,
Fa Fa La Fa La, etc

Grace (Gamaka)

Graces (gamaka s) are the ornaments of the notes (Sangīta darpaṇa, comm 2-4)

"When, in singing, a note rises from its own pitch and moves toward another so that (something of the expression of) the second sound passes like a shadow over it, this is called a grace (gamaka) " (Sangīta-samaya-sāra, 1, 47)

The ways in which notes can be attacked, ornamented or resolved are known under the general name of *gamaka*

In Indian music these graces are very elaborate and present an endless variety They may, however, be analysed Shārn-gadeva and Nārada III consider that their constituent elements number fifteen Pārshvadeva reduces them to seven, Nārada II extends them to twenty-one

"Gamaka-s, also called 'roaming about' (charana), are said to be of twenty-one kinds " (Sangīta-makaranda, 2, 17)

"The grace that pleases the mind of the hearer is a *gamaka* These are of fifteen different kinds, called *līṛīpa* (flurry), *sphurita* (throb), *kampita* (shake), *līna* (melting away), *āṇḍolita* (swing), *vali* (ripple), *tribhīnna* (threefold), *kurula* (curl), *āhata* (struck), *ullāsita* (laughing), *plāvita* (overflow), *gumphita* (tied), *mudrita* (sealed), *nāmīta* (obedience), *mishrita* (mixed) " (Sangīta-ratnākara, 2, 3, 87-89)

"Seven of the *gamaka*-s are more particularly known They are *sphurita*, *kampita*, *līna*, *līṛīpa*, *āhata*, *āṇḍolita* and *tribhīnna* " (Sangīta-samaya-sāra, 1, 48)

The Sanskrit definitions of the *gamaka*-s are not always clear They are interpreted here in a way which presents the most likely results for the formation of the combined graces Some of them may, however, have been misunderstood

All definitions of the *gamaka*-s in the *Sangīta-ratnākara* are reproduced with a few minor variations in the *Shiva tattva-ratnākara*, 6, 7, 100-116

- (1) The Flurry (Tiripa) (or Tiripu)
is now called *Hillola*

“A lovely quivering like a very gentle stroke on the drum, lasting only a quarter of a quaver (druta—i.e. one-eighth of a mātrā) is known as *Tiripa*.” (*Sangīta-ratnākara*, 2, 3, 89-90.)

“When the intervals quickly move round like a whirl, this the connoisseurs of music know as *Tiripu*.” (*Sangīta-samaya-sāra*, 1, 52.)

- (2) Throb (Sphurita)
now called “Gitkiri”

“The speed of *sphurita* is exactly one-third of a quaver (i.e. one-sixth of a mātrā).” (*Sangīta-ratnākara*, 1, 3, 90.)

- (3) The Shake (Kampita)
now called “Khatkā”

“The *Kampita gamaka* lasts a semi-quaver (i.e. one-quarter mātrā).” (*Sangīta-ratnākara*, 2, 3, 91.)

“A shake of the note at twice the speed of a quaver (i.e. one-quarter mātrā) is known as *Kampita*.” (*Sangīta Samaya-sāra*, 1, 50.)

- (4) Melting away (Līna)

“The speed of *Līna* is that of a quaver (druta = one-half mātrā).” (*Sangīta-ratnākara*, 2, 3, 91.)

“When a note at the speed of a quaver softly melts into another neighbouring note this is called Melting away (*Līna*).” (*Sangīta-samaya-sāra*, 1, 51.)

- (5) Swing (Āndolita)

“*Āndolita* lasts one crotchet (one mātrā).” (*Sangīta-ratnākara*, 2, 3, 91.)

“Whatever the speed of singing—fast, medium or slow—a swing lasting one crotchet (mātrā) constitutes the grace called

Āndolita " (Śimhabhūpāla commentary on the *Sangīta-ratnākara*, 2, 3, 90)

"When there is a rocking of the notes lasting one crotchet or *mātrā*, this grace is spoken of as a 'swing' by connoisseurs of music " (*Sangīta-samaya-sāra*, 1, 54)

(6) The Overflow (*Plāvita*) 

"When the shake of the notes lasts three crotchets (1 *pluta* = 3 *mātrā*-s) this is called an Overflow " (*Sangīta-ratnākara*, 2, 3, 94)

(7) The Ripple (*Vali*)
now called *Mīda* 

"Any kind of fast sliding is called a Ripple (*Vali*) " (*Sangīta-ratnākara*, 2, 3, 92)

(8) The Curl (*Kurula*)
now called *Ghasita* 

"*Kurula* is like *Vali* but performed softly with a contracted throat " (*Sangīta-ratnākara*, 2, 3, 93)

(9) The Sealed (*Mudrita*)

"The *gamaka* called Sealed is produced by closing the mouth " (*Sangīta-ratnākara*, 2, 3, 95)

(10) The Tied (*Gumphita*) 

"A deep aspirate descending into the chest is called Tied (*Gumphita*) " (*Sangīta-ratnākara*, 2, 3, 95)

(11) The Threefold (*Tribhūna*) 

"The Threefold is a compact ornament running at one stroke through three notes without any rest " (*Sangīta-ratnākara*, 2, 3, 92)

"A grace that touches three distinct points and amalgamates

the qualities of all the three, turning round the note in a single flow, is traditionally known as the Threefold (Tribhinna)." (*Sangīta-samaya-sāra*, 1, 55.)

The *Brihaddeshī* calls this ornament *Kuharita* (Cuckoo) in the middle octave and *Rechita* (the Gallop) in the higher octave.

(12) Struck (*Āhata*)

"Striking a neighbouring note and coming back is known as 'Struck' (*Āhata*)."

 (*Sangīta-ratnākara*, 2, 3, 93.)

"Striking the next highest note, touching it slightly, and quickly coming back is called 'Struck' (*Āhata*)."

 (*Simhabhūpāla* comm. on the *Sangīta-ratnākara*, 2, 3, 93.)

Matanga calls this ornament the Point (*Bindu*):

"When, after remaining a long time on a note such as *Sa* (*Do*), one touches with the speed of fire a higher note, remains there but for a semi-quaver (*Kalā* = $\frac{1}{4}$ *mātrā*) and again comes down to the original *Sa*, this is the Point (*Bindu*)."

 (*Brihaddeshī*, comm. on 1, 120.)

A succession of *Āhata*-s makes a sort of sobbing trill called *Gadgadita* (Sobbing), often used in Indian music.

(13) Laughing (*Ullāsita*)

"When the notes follow one another in order this is called 'Laughing' (*Ullāsita*)."

 (*Sangīta-ratnākara*, 2, 3, 94.)

"In *Ullāsita* the notes ascend, one following another."

 (*Simhabhūpāla* comm. on the *Sangīta-ratnākara*, 2, 3, 94.)

(14) Obeisance (*Nāmita*)

"A bowing down of the notes the expert in music calls *Nāmita*."

 (*Sangīta-ratnākara*, 2, 3, 96.)

"*Nāmita* is an ornament in which the notes come down to a lower pitch as if bowing."

 (*Simhabhūpāla* comm. on the *Sangīta-ratnākara*, 2, 3, 95.)

(14a) Liberated (*Nivritta*)

is the opposite of *Nāmita*.

"Touching another note for one semiquaver, as in Bindu, but stopping it without any tendency to come back is called *Nivṛtta* (Liberated) " (*Bṛhaddeshī*, comm on 1, 120)

* * *

Elaborate ornaments can be built from these elements
They are called the mixed *gamaka-s*

(15) Mixed (*Mishṛita*)

"Mixtures of these are known as the 'Mixed' (*gamaka-s*)
They are of many kinds " (*Sangīta-ratnākara*, 2, 3, 96)

Examples of mixed *gamaka-s*, given in the *Sangīta-ratnākara*,
(3, 178-182)

(1) Flurry—swing
(*Tṛipa-āṇḍolita*)

(2) Melting away—shake
(*Līna-kampita*)

(3) Shake—struck
(*Kampita-āhata*)

(4) Flurry throb
(*Tṛipa-sphurita*)

(5) Melting away—throb
(*Līna-sphurita*)

(6) Throb—struck
(*Sphurita-āhata*)

(7) Melting away—shake—melting away
(*Līna-kampita-līna*)

- (8) Threefold—curl—struck
(Tribhinna—kurula—āhata)

- (9) Overflow—laughing—ripple
(Plāvita—ullāsita—vali)

- (10) Ripple—tied—sealed
(Vali—gumphita—mudrita)

- (11) Obeisance—swing—ripple
(Nāmita—āndolita—vali)

- (12) Ripple—obeisance—shake
(Vali—nāmita—kampita)

- (13) Swing—overflow—much laughing—obeisance
(Āndolita—plāvita—samullāsita—nāmita)

- (14) Flurry—swing—ripple—threefold—curl
(Tiripa—āndolita—vali—tribhinna—kurula)

- (15) Threefold—melting away—throb—overflow—swing
(Tribhinna—līna—sphurita—plāvita—āndolita)

The modern *Bhelava*, a slow mordent at the end of a glissando, would be *Vali-sphurita*.

The Four Phases in the Development of a Rāga

A *rāga* is generally developed in four phases, called *Sthāyī*, *Antarā*, *Sanchārī* and *Ābhoga*

- I **THE STHĀYĪ** (The Pallavi of South Indian music) establishes the theme, starting from the middle tonic (middle Sa). It is focused on the predominant note (vādi) of the mode and though it never rises above the B (Nī) of the middle octave, it descends as deeply as possible into the lower octave.
- II **ANTARĀ** (the Anupallavi of South Indian music) starts from the middle of the middle octave and develops mainly towards the upper octave. It is focused on the consonant (samvādi), the secondary predominant note situated in the upper tetrachord.
- III **SANCHĀRĪ** (the Charanam of South Indian music) begins from the higher C (Sa) and moves freely in all three octaves.
- IV **ĀBHOGA** is a concluding variation, also starting, as a rule, from the higher C (Sa). In songs, the text of the *ābhoga* usually mentions the name of the composer.

In songs, the *sthāyī* is sung again after each part. In late medieval music, these four phases were rather differently divided. They were called *udgrāha* (prelude), *sthāyī* (theme), *sanchārī* (variation) and *muktāyī* (conclusion).

Shrī Nivāsa in his *Rāga-tattva-vibodha* describes them as follows:

"The melodic figures with which one begins are called *udgrāha* (prelude). The fixed melodic figures which do not as a rule appear at the beginning or the end are known to experts as *sthāyī* (the theme). The mixed theme, with ascending (and descending) vocalisation, is called *sanchārī* (variation). Where the mode comes to a rest is called *samāpti* (conclusion)."

Styles of Music

There are kinds of sound-relations intended merely to give pleasure, to evoke tender emotions and pleasing ideas. Only such kinds of sound come within the scope of secular or *deshī* music.

The chief terms used in ancient books to define the different kinds of music are as follows:

GĪTA (Music):

"A particular arrangement of sounds which is pleasing [to hear] is called music (gīta). It is of two kinds—sacred or celestial (gāndharva) and profane (gāna)." (*Sangīta-ratnākara*, 2, 4, 1, reproduced in *Svaramela-kalānidhi*, 2, 6.)

GĀNDHARVA (Sacred or Celestial Music):

"That [music] which, sung by celestial musicians or by those who know the theory of sacred music, which has come to them through the tradition, which knows no beginning, and which is the sure means of attaining Liberation, is known to the sages as Celestial (gāndharva)." (*Sangīta-ratnākara*, 2, 4, 2, and *Svaramela-kalānidhi*, 2, 7.)

This celestial music is also called the "path" (mārga) and is said to be composed in accordance with the cosmic laws of which physical harmony is but a reflection.

"That music, source of [all] development, which, in the beginning, was seen by the Creator in his contemplation and afterwards performed by Bharata and the other seers in the resplendent presence of Shambhu (Shiva), the Giver of Peace, is called the 'path' (mārga)." (*Chatvārimshach'hata-rāga-nirūpanam*, 1, 8-9; and *Sangīta-ratnākara*, 1, 1, 22-23.)

The derivation of the word *mārga* is given by Kallinātha: "*Mārga* means 'to contemplate'."

The relationships between spoken and musical sounds according to the *Mārga* theory are given in the *Rudra-damarūdbhava-sūtra-vivaranam*.

GĀNA (Profane Music):

"That [music] which is composed according to rules by experts, which is sung in the modes of secular or worldly music (deshī rāga-s), and which charms the people is *gāna*, 'profane music'." (*Sangīta-ratnākara*, 2, 4, 3 and *Svaramela-kalānidhi*, 2, 9.)

DESHĪ (Secular Music):

"The song, dance and playing of instruments, different from country to country and performed as people please, which charms the heart, is called *deshī* (secular)." (*Chatvārimshach'hata-rāga-nirūpanam* 1, 10; and *Sangīta-ratnākara*, 1, 1, 23.)

Matanga believes that the word *deshī* (worldly) applies to all earthly music. "Sound (dhvani) goes everywhere in every place, hence it is called *deshī*" (*Bṛhaddeshī*, 1, 2)

"All the world, animate or inanimate, is subject to sound (dhvani). Sound is divided into two kinds—manifest and unmanifest. Manifest is the sound that comes to the lips in the form of a 'melodic movement' (varṇa), giving rise to *deshī* (secular) music" (*ibid*, 1, 12)

Styles of Singing or Playing

There are many distinct styles in which the variations of a *rāga* may be sung or played. Some of the most important are briefly described here.

A STYLES OF SINGING

1 *ĀLĀPA* is the sober exposition of the theme in slow tempo, with portamentos but no elaborate ornaments.

2 *SVARAMĀLIKĀ*, OR *SVARA-GRĀMA*, or *SA-RI-GA-MA* is a form of *Ālāpa* which is sung using the names of the notes.

3 *DHRUPADA* is solemn and religious in style, usually sung in slow time and using only the more sober rhythms (*tāla*-s). It is the noblest and also the most difficult style of singing.

Bhāva Bhatta in his *Anuṣṭa Sangīta-ratnākara* defines *Dhrupada* as follows:

"*Dhrupada* is a divine traditional style of singing that shines in the language and literature of the Middle Country. Composed of two or four sentences expressing the emotion of love, it is sung by both men and women. It consists of a poem set to the *ālāpa* of a *rāga* with repetition of final syllables and of groups of syllables conveying different meanings. It has a metrical introduction in two verses, a prelude, a chorus, and a final stanza of noble style" (*Anuṣṭa Sangīta-ratnākara*, 1, 65-67)

Except for some minor developments in its style, the *Dhrupad* has remained very similar to the ancient *Dhruva pada*, and today it still represents the most austere and noble style in Indian vocal art. Vocalisations which belong to the *Khyāl*, and the slight variations of the *Thumrī*, are not allowed here.

In the *Dhrupad* the expression of the *rāga*, the significance of the mode, is conveyed at its most profound level. A long prelude, the *ālāpa*, introduces the mode and the poem. The verses or individual words can be repeated several times and certain verses can recur like a refrain.

4. DHAMAR is a lighter form of *Dhrupad* sung always in the *Dhamar* rhythm. It is mainly used for singing love poems in a light vein.

5. JHORA is an *ālāpa* without portamentos. (Almost all Western vocal music would be considered as *Jhora*.)

6. TANJHORA is a fast *Jhora*.

7. KHĀNDĀRVĀNĪ DHRUPADA is a *Jhora* sung with each note repeated several times as if the voice were shaking.

8. In KHYĀL elaborate ornaments are used, particularly ascending and descending vocalisations, trills and grace notes (*gamaka-s*) and repeated groups of notes or melodic figures (*tāna-s*). *Khyāl* is charming and light, often used for love songs. It is usually sung in *madhya tāla* (moderate tempo). It is one of the most appreciated forms of Indian singing. We might compare it to bel canto.

9. TAPPĀ is a very elaborate style of singing in which each note of the *Dhrupada* prototype is delicately ornamented without, however, breaking or obscuring the general melodic line. It is usually sung in *madhya tāla*.

10. THUMRĪ combines *Khyāl* and *Tappā* in a very ornamental form (*gamaka-s*), and repeats each word or line in varied styles. It is very lively, and can be adapted to pantomime and dancing. It is usually sung in *madhya tāla*. It has only one *sthāyī* and one *antarā*.

11. TELLANĀ-S are sung rhythmically on the syllables (*bol-s*) used to represent the strokes of the drum.

12. DĀDRĀ-S were originally folk-songs in *Dādrā tāla* which developed into a lively style of classical singing.

13. GHAZAL-S (of Persian origin) are love-lyrics sung in a form similar to light popular *Thumrī-s*. They consist only of an *antarā* with a simple melody.

14. BHAJANA-S are religious popular songs with a fixed melody accompanied by rhythmic instruments. They are often sung in mixed *rāga-s*.

15. KĪRTANA-S are similar to *Bhajana-s*. Usually the *Kīr-*

tana-s form a succession of religious songs with changes of mood and *rāga*. This style is especially developed in Bengal.

B STYLES OF PLAYING (ON STRING-INSTRUMENTS)

1 VILAMPAT is the development of the theme in slow tempo with portamentos, etc. It corresponds to *Ālāpa* in singing.

2 JHORA is played on the *vīṇā* with the first two fingers only. It is the bare melody, each note separate, with neither portamento nor ornament.

3 JHALĀ is a rhythmic style in which each note of the melody is followed by a fixed number of rhythmic strokes on the tonic. For example

4 THONK resembles *Jhora*, but is played loud and fast.

5 THONK-JHALĀ is a mixture of *Thonk* and *Jhalā*.

6 In TARPARAN the strings are struck by rapid forward and backward strokes of the finger or a metal nail.

CHAPTER V

THE RĀGA-S

"I do not dwell in heaven, nor in the heart of yogis. There only I abide, O Nārada, where my lovers sing" (*Nārada Samhitā*, I, 7.)

"THAT which charms is a *rāga*."

Indian music, like Arabian and Persian, always centres around one particular emotion which it develops, explains and cultivates, upon which it insists, and which it exalts until an impression is created on the listener which is almost impossible to resist. The musician can then, if his skill be sufficient, lead his audience through the magic of sound to a depth and intensity of feeling undreamt of in other systems.

The notes which are to convey particular emotions or ideas must be carefully selected from the twenty-two intervals of the shruti scale and then grouped to form a mode, a *rāga*. Any artificially constructed scale is not necessarily a *rāga*, for its meaning may be confused and without appeal. The essential feature of a *rāga* is its power of evoking an emotion that takes hold of the hearers like a spell.

"The word '*rāga*', is obtained by adding the suffix '*ghan*' (which indicates 'doing') to the root '*ranj*', 'to please.'" (*Sangīta-darṣana*, comm. on 2-1.)

"That group of notes (*svara*-s) which charms is a '*rāga*': so say the wise."

When all the notes that form a mode combine to express one coherent mood, the *rāga* appears more attractive and its magic more powerful. The mode must seize the mind and hold it as if enchanted. Then the mind "is charmed and becomes lost in it". (*Rāga-vibodha*, I, 4.)

"A *rāga*, the sages say, is a particular arrangement of sounds in which notes and melodic movements appear like ornaments to enchant the mind." (*Sangīta-darṣana*, 2-1.)

The Number of Rāga-s

In each of the seventy-two possible basic scales of seven notes we can have one mode using seven notes in ascent and in descent, six different modes using seven notes in ascent and six notes in descent, fifteen different modes using seven notes in ascent and five notes in descent, six different modes using six notes in ascent and seven notes in descent, fifteen different modes using five notes in ascent and seven notes in descent, thirty-six different modes using six notes in ascent and six notes in descent, ninety different modes using six notes in ascent and five notes in descent, ninety different modes using five notes in ascent and six notes in descent, two hundred and twenty-five different modes using five notes in ascent and five notes in descent

This gives a total of 484 modes in each scale, or 34,848 modes in the seventy-two scales

If we now consider that there are modes in which the ascending and descending scales vary, modes which combine several scales, etc., we see that the number of possible modes is practically unlimited. It would be difficult in a life-time to hear them all, even once

Ahobala speaks of 18,678 modes of seven notes, 31,050 modes of six notes and 17,505 modes of five notes in the *Māgrāma* alone

Krishnānanda Vyāsa in his *Rāga Kalpa-druma* (Introduction, p 1) writes

"For the sake of the 16,108 milkmaids, the Dark Lord, Krishna, took the same number of shapes. Each of the milkmaids for each of the Krishna-s sang a different *rāga* in a different rhythm, thus giving birth to 16,108 modes. These *rāga-s* and *rāgini-s* later became famous on earth"

In practice only a few hundred *rāga-s* are in general use, although as we have seen, their classification is often confused, the same *rāga-s* having different names in different provinces, and different *rāga-s* the same name

Moods, Colours and Notes

Each of the notes of the scale has its own kind of expression and a distinct psychological or physical effect, and so it can be related to a colour, a mood, a metre, a deity or one of the

subtle centres (chakra-s) of the body. These relationships are given an important place in all Sanskrit treatises on music. Since a complete list of them would be very lengthy, only the relationships of notes with moods and colours will be given here as an example.

“Love (shringāra), laughter (hāsyā), compassion (karuna), heroism (vīra), wrath (raudra), fear (bhayānaka), disgust (bībhatsa), wonder (adbhuta) and peace (shānti) are the nine moods of dramatic art. . . .”

Of these, for laughter and love, *Madhyama* (fourth) and *Panchama* (fifth) are used.

In the heroic mood, in wrath and wonder, *Shadja* (tonic) and *Panchama* (fifth) (or *Rishabha*, second):

“*Shadja* (tonic) and *Rishabha* (second) in the heroic mood in wrath and wonder.” (*Brihaddeshī*, 1, 84.)

“For compassion, *Nishāda* (minor seventh) and *Gāndhara* (minor third);

in disgust and fear, *Dhaivata* (sixth);

in peace, *Madhyama* (fourth).” (*Vishnu-dharmottara*, 3, 18.)

“*Shadja* (C, the tonic) is bright like the petals of a lotus.

Rishabha (D) is like a parrot.

Gāndhāra (E♭) is golden.

Madhyama (F) is like jasmine.

Panchama (G) is dark (or, of the colour that attracts).

[That which attracts is called ‘*Krishna*’ (dark).]

Dhaivata (A) is yellow.

Nishāda (B♭) is of all colours.”

(*Brihaddeshī*, 1, 77, and *Nārādīya Shikshā*, 4, 1-2.)

According to the *Sangīta-ratnākara* (1, 3, 54) *Rishabha* (D) is tawny (Pinjarah).

The Description of Rāga-s in Verses and Pictures

The relationship of the notes to colours, emotions, deities etc., makes a graphic representation of the modes possible. The *rāga* determines a state of feeling which can also be expressed in poems or in pictures. It should be remembered, however, that, since many *rāga*-s have changed their form, the ancient pictures and poems may no longer accurately represent the *rāga* after which they are named.

The poems are still known to the musicians, though they do not always know the books from which they are taken. Most of the verses, later reproduced in the *Sangīta-darpana*, the *Chatvārimshach'hata-rāga-nirūpanam*, the *Shiva-tattva-ratnākara*, the *Rāga-sāgara* and several other works, seem originally to have come from a work of Kohala now believed lost. Further verses are quoted, without reference, in the nineteenth-century encyclopedic work *Rāga-kalpa-druma*.

In several of the verses describing the *rāga*-s, we follow the quotations of the *Sangīta-darpana* given in the *Shiva-tattva-ratnākara* rather than the text of the available edition of the *Sangīta-darpana* itself, which seems corrupt.

Tuning of the Instruments

From a technical point of view a *rāga* is essentially a scale with a tonic and two axial notes, but which is endowed with further characteristics.

The frets of the stringed instrument must first be set to the proper intervals, the proper *shruti*-s. On some Indian stringed instruments the frets themselves are movable, to allow for this. On instruments such as the *vinā*, where the frets are fixed, the exact notes have to be played by pulling laterally the string on the fret corresponding to a lower note. This renders the technique more difficult.

The true tuning, by which the expression of the *rāga* is defined, is always that of the descending scale. In *rāga*-s where there is a difference of *shruti*-s in ascent and descent the scale tuned for descending can be used for ascending by pulling or pressing the string, but the tuning of the ascending scale can never be used for the descending one.

It should be noted that there is a strict correspondence between the tuning of the different notes, the ascending and descending scales and other peculiarities of a *rāga*. Some *shruti*-s are mutually related by such intervals as prevent them from being played in succession. If, therefore, the expressions they represent have to be brought together to constitute the mood of a certain *rāga*, their use may require melodic artifices since they may never be taken in direct succession.

The tuning, the ascending and descending notes, the sonant and consonant, the theme and the expression form a homo-

geneous entity which very often, for arithmetical as well as acoustical reasons, simply cannot be other than it is. Therefore *rāga*-s should never be considered as the invention of an inspired artist; they can, at best, only be discovered as we discover a physical law that represents some aspect of the universe in which we live—a law, not in our power to modify.

Theme (Rūpa) and Outline

There are a few very typical groups of notes for each *rāga* by which it can at once be recognised. These form the main theme (*rūpa*).

It is impossible to write down in full the ever-changing development of a *rāga*. We have to limit ourselves to the first part of an average "exposition of the theme" (*ālāpa*) notated in its simplest form. From this, however, the musician is able to perceive the complete form of the *rāga* and, following the rules, proceed to the variations.

Time of Play

"One who sings knowing the proper time remains happy By singing *rāga*-s at the wrong time one ill-treats them. Listening to them, one becomes impoverished and sees the length of one's life reduced" (*Sangīta-makaranda*, I, 23-24.)

The cycle of the day corresponds to the cycle of life which also has its dawn, its noon, its evening. Each hour represents a different stage of development and is connected to a certain kind of emotion. The cycle of sounds is ruled by the same laws as all other cycles. This is why there are natural relationships between particular hours and the mood evoked by musical modes. Musical modes played at the proper time develop naturally in favourable conditions. Orthodox musicians in India never play a *rāga* at any other than its proper time, for at the wrong hour it could never be developed so perfectly nor could it so greatly move an audience. The Western organist who would play a funeral march at a wedding would, to say the least, appear lacking in taste. In the same way the Indian musician who plays a morning mode in the evening disregarding the surroundings and the mood of his listeners appears utterly lacking in sensibility.

There are certain characteristics through which a *rāga*

shows at what time it should be played. *Rāga*-s to be played between midday and midnight have their predominant note (vādī) in the lower tetrachord (pūrva anga). They are called "Pūrva rāga-s". *Rāga*-s to be played between midnight and midday have their predominant note in the upper tetrachord (uttara anga). They are called "Uttara rāga-s".

Modes that correspond to crucial moments (sunrise, sunset, midday, midnight, solstices, equinoxes, etc.) often use both $F\sharp$ and $F\flat$ (Ma tivra and Ma shuddha).

Besides these, Bhātkhande indicates the following time-characteristics, which are generally followed:

(1) Modes sung at sunrise and sunset are known as "samdhi-prakāsha (twilight) rāga-s". Most of them include $R\flat$ and *Dha komala* (D and A flat).

(2) Modes with *Ga* and $N\flat$ *komala* (E and B flat) usually belong to the middle of the day or night.

(3) Modes with $R\flat$, *Ga*, *Dha* and $N\flat$ *shuddha* (D, E, A, and B natural) are usually played after twilight—in the first quarter of morning or night.

(4) Modes sung before twilight—in the last quarter of day or night—insist on the tonic, the fourth and the fifth (Sa Ma and Pa).

The *rāga*-s of evening twilight never omit *Ga* and $N\flat$ (E and B), and the *rāga*-s of morning twilight never omit $R\flat$ and *Dha* (D and A).

These rules, however, are not infallible.

PART II

NOTATION AND ANALYSIS OF THE RĀGA-S

“Even if he be an expert in the revealed and the traditional scriptures, in literature and all sacred books, the man ignorant of music is but an animal on two feet.”

Notation

Shruti-s (intervals of one comma) ♮ ♭ ♮ ♭ ♮
D♭- D♭- D♭ D♭- D♭..

CHAPTER I
EARLY MORNING RĀGA-S

1. LALITĀ at dawn

This very fair and amiable yogi, anointed with divine fragrances, with tangled locks and a deer coming to his hand, is known as Lalita.

(*Chatvārimshach'hata rāga nirūpanam* p. 14)

Lalitā, charming in her innocence, is bright like gold. While she holds a lute, a cuckoo perches on her lotus hand. She is seated beneath the Wishing-tree, her breasts all unadorned, a thousand times desirable.

(*idem* p. 13)

A Vīṇā and a book in her hands, Lalitā appears, the Goddess of music. Charminglly playful she talks lightly, her eyes like red lotuses.

(*Rāga-sāgara* 3, 7)

Lalitā, young and fair, and garlanded with seven-fold flowers. Her long eyes like the petal of the lotus. Sighing, overwhelmed by fate—still, at dawn, dressed for a lovers' meeting.

(*Chatvārimshach'hata-rāga-nirūpanam* p. 20;
Sangīta-darṣana 2, 63; *Shīva-tattva-ratnākara*, 6, 8, 90)

OR, IN ANOTHER READING

The young and fair Lord of Lalitā wears a garland of the sweet-scented seven-fold flowers. His lovely laughing eyes are long like the petal of the white lotus. It is dawn. Overwhelmed by fate, Lalitā sighs dressed for a lovers' meeting.

with a diatonic variation

CHARACTERISTICS Lāchārī is Todī with both E and E $\flat$ (Ga and GaK) and both B and B $\flat$ (Ni and NiK). B $\flat$ (NiK) is used only as an ornament from Pa (G) provided there is no touch of F (Ma) in the melodic figure. Any other use of B $\flat$ (NiK) would create confusion in the expression of the mode.

E+ (Ga+) should be used only in ascending, preferably without touching the D $\flat$ (RiK). E+ (Ga+) should always be accentuated, used in any other way, it changes the expression of the mode.

As a rule in any rāga, whenever both E (Ga) and E $\flat$ (GaK) or B (Ni) and B $\flat$ (NiK) are used it is necessary after playing one of them, to come back respectively to C (Sa) and to G (Pa) before playing the other, as both have harmonious relations with the tonic and the fifth respectively but generally no direct relation with one another. They represent different paths for the melody, and when entering into one, it is necessary to come back to the starting point before entering the other.

(Bhātkhande uses also A $\flat$ (Dha shuddha) and D $\flat$ (Ri shuddha) in this rāga.)

EXPRESSION: Appeal with hope of success. This hope fails, thus despair. Double-edged, both angry and sober, both ordering and appealing, asking with red angry eyes (k shuddha notes) and then with eyes full of tears (b, komal notes).

Ga+ and Ni+ (E+ and B+) mean command, order.

B+ Ni+ means imperious desire ("I wish you to do it"), while Bb (NiK) means helplessness ("as you will").

*"You promised it,
you must do it."*

Tears, appeal

SHRUTI-S: expression

tonic

sad, plaintive

tender

imploring, loving

command, activity, self-confidence,
demand, contentment

active, somewhat interrogative,
adds to the active character of
G (Pa)

activity, it solves the anxiety and
questioning of Eb (GaK)

sad, desperate (used with Bb
(NiK))

tender, loving (used in ascending)

helplessness, submission, tears

command, imperious desire,
obstinacy, activity

THEME (Rūpa):

OUTLINE

Scale

STHĀYI

Plaintive but not too slow ($d = 52$)

CHARACTERISTICS A very typical and attractive type of enharmonic scale

EXPRESSION Very tender and loving appeal Ga k- (E $\flat$ -) is dependent, appealing sad (Note the E+ (Ga+), impertinent vanity in Mukhârî Todi)

Ma T+ (F $\sharp$ +) is clear, manly, at ease, stern and strong

masculine

feminine

weeping

SHRUTI-S expression

tonic

sad

demanding, very tender
satisfied, less tender more
confident, "the appeal has
been heard"

very sad, pathetic, crying

intensifies the sadness and
beauty of the Ruk (D $\flat$) and
Gak (E $\flat$)

sunshine, hope

sad

tender

asking for pleasure

obstinate, active, a little
selfish

THEME (Rāḍa)

OUTLINE

STHĀYI

Very slow, soft and melancholy (♩=35)

ANTARĀ

VILĀSAKHĀNĪ TODĪ

This rāgā is the creation of Vilāsa Khan, a musician of the Moghul Court
There is no Sanskrit poem depicting its mood

TUNING OF INSTRUMENT

GROUP Todī

CLASS (*Jāti*)
Shadava (hexatonic)

Aroha Ascent

Avaroha Descent

SONANT (*Vādī*) A♭- (Dha k-)

CONSONANT (*Samvādī*) E♭- (Ga k-)
but D♭-- (Rī k--) is also very prominent

TIME OF PLAY day, first quarter (from sunrise)

MODE TYPE (*Thāta*) Todī _

SCALE TYPE Chromatic in the lower tetrachord and usually chromatic in the upper one, which only accidentally becomes Enharmonic (B++, Nī++)

CHARACTERISTICS No G (no Pa) Resembles Gurjarī but with F#-- (Ma t--)
(Under the name of Vilāsakhānī Bhātkhande gives another rāga with B♭ (Nī komal) and G (Pa))

EXPRESSION:

The absence of G (Pa) creates an impression of great sorrow, that of an irreparable loss mourned. Very sorrowful, intense grief and misery (like the death of a very dear friend)

There is no trace of harshness or selfishness

5. TODĪ GROUP II (Yāvanapūrī)
(First quarter of the day)

Gāndhārī

Deshī

Pathamanjarī

Yāvanapūrī

Āsāvarī

GĀNDHĀRĪ

"Her two hands clasping a Vīnā, Gāndhārī is seen ever seated near the temple of Shiva, Lord of Sleep Her crown is of gold set with precious stones"

(Rāga-sāgara 3, 47)

GROUP (Yāvanapūrī) Todī

TUNING OF INSTRUMENT

CLASS (*Jāti*) Audava-sampūrṇa
(Pentatonic in ascent and
heptatonic in descent)

SONANT (*Vādī*)
Aḥ (DhaK)

CONSONANT (*Samādī*)
Eḥ (GaK)

TIME OF PLAY day, first quarter (from sunrise)

MODE TYPE (*Thāṭa*) Yāvanapūrī

SCALE TYPE Diatonic (but in the ascent
the first tetrachord is chromatic and
the second enharmonic)

CHARACTERISTICS Yāvanapūrī scale played in Āsāvārī style

EXPRESSION Tender, calm but with love and charm No B (Ni) in ascending
shows purity

appeal, "I need"

asking

SHRUTI-S: expression

tonic

forceful, self-confident, honest,
straightforward

loving, tender

contented, peaceful

satisfied, brilliant, active

tender, not sad

asking, expecting, pleasant

pleasing, not sad

aspiration, desire. (When absent
purity)THEME (*Rūpa*):

PATHAMANJARĪ

"Grown lean and tarnished sundered from her lover,
Pathamanjarī decks with flowers her withered beauty Her
friend is trying to comfort her "

(*Saṅgīta darpaṇa* 2, 62
Śhiva tatva ratnākara 6 8 87)

"I ever see Rāga Phalamanjarī seated in a bower of grape
vines with young women on his sides Magnificent, he wears
a crown and armlets set with precious stones "

(*Rāga sāgara* 3 13)

GROUP (Yāvanapūrī) Todī

TUNING OF INSTRUMENT

CLASS (*Jātī*) Audava-sampūrṇa
(Pentatonic in ascent and
heptatonic in descent)

SONANT (*Vādī*) G (Pa)

CONSONANT (*Samādī*) C (Sa)

TIME OF PLAY day first quarter (from sunrise)

MODE TYPE (*Thāṭa*) Kāfi

SCALE TYPE Diatonic (chromatic in ascent)

CHARACTERISTICS: Somewhat resembles Deshī but its samvādī is C (Sa).
A+ (Dha+) is high, there is no E (Ga), no A (Dha) in ascent.

EXPRESSION: Joyful, playful but ambitious G and C (Pa and Sa) give an expression graver than Deshī. This rāga is akin to Āsāvārī in spite of the D natural (Ri shuddha).

Joyful, active

SHRUTI-S: expression

tonic, joyful, active

activity, force, confidence

tender, loving

contented, calm

joyful, active

active, somewhat nasty, ambitious

eager, inquisitive

THEME (*Rūpa*):

OUTLINE

Scale

STHĀYĪ

Gaily ($\text{♩} = 52$)

ANTARĀ

YĀVANAPŪRĪ

Yāvana Todī is fully ripe, a foreign girl. Richly dressed, her hair plaited upon her brow, she wears golden ear-rings shaped like flowers and set with precious stones. Skilful, she plays in the morning languidly, sipping the wine of grapes, letting her white limbs and lovely form be seen.

(Rāga-mālā of Pundarika Viṭhala)

GROUP: Todī

CLASS (*Jātī*): Shādava-sampūrṇa (hexatonic in ascent and heptatonic in descent)

TUNING OF INSTRUMENT:

Āroha Ascent

Avaroha Descent

SONANT (*Vādī*): A♭ (Dha k.)

CONSONANT (*Samvādī*): E♭ (Ga k.)

TIME OF PLAY: morning first watch (6 to 9)

MODE TYPE (*Thāla*): Yāvanapūrī

SCALE TYPE: Pythagorean diatonic. Plagal mode of A(Dha) in the natural scale

CHARACTERISTICS combination of Deshī and Gāndhārī (Bhātkhande calls this rāga Āsāvārī)

EXPRESSION Tender, loving and active appeal Sensuous but with depth of feeling; daring and childish (D, Rī), but, at the same time, grown-up and serious (Aḥ, Dha k.), with grace and beauty

D (Rī) manly, commanding, childish, stubborn (In Āsāvārī Dḥ (Rī k) is wise and melancholy)

Aḥ (Dha k.) is mature

Bḥ+ (Nī k.+) is impure, selfish

Request with selfish motives

SHRUTI S expression

tonic

self asserting, forcible, manly, commanding, stubborn, contented
 very mild, appealing, interrogative, desire, questioning
 soft, peaceful
 clear, awake
 resembles Eḥ (Ga k.) mild, appealing, mature, melancholy
 appeal, love, beauty
 selfish, erotic

THEME (*Rāpa*)

ĀSĀVARĪ

Her breast adorned with saffron, embraced by her man of expert taste in music, so shines Asāverī, in the mind of the sages

(*Chatvārimshach'hata-rāga-nirūpanam* p 22)

I remember Asāverī, all clad in red, eating pomegranates
Fair, with lovely nails, her arm supports her heavy breasts
Holding a cushion she bends her body and shows her face,
loosening her garments in her eagerness for pleasure

(*Rāga-sāgara* 3, 65)

On the peak of a mountain, Āshāvarī of shining blackness,
adorned with peacock feathers and a rare necklace of splendid
pearls, drags forth the serpent from the sandal-trees and wears
it as a zone

(*Sangita-darpana* 2, 75,
Shiva-tattva-raśnākara 6, 8, 113)

GROUP Todī

CLASS (*Jātī*) Audava-sampūrṇa
(pentatonic in ascent and heptatonic in descent)

Āroha Ascent

Avaroha Descent

TUNING OF INSTRUMENT

SONANT (*Vādī*) A♭ (Dha k.)

CONSONANT (*Samvādī*) D♭ (Rī k.)

TIME OF PLAY morning first watch (6 to 9)

MODE TYPE (*Thāta*): Bhairavi

SCALE TYPE: enharmonic in ascent, and diatonic in descent

CHARACTERISTICS: resembles Gāndhārī or Yāvanapūrī but with B $\flat$ (Ri k.)

EXPRESSION:

Renunciation, grave and dignified. Ascent always by thirds.

Similar to Gāndhārī but more pathetic because of D flat (Ri komal) which makes it more feminine and deeper than Yāvanapūrī, it introduces melancholy but also wisdom and soberness. (The D natural (Ri shuddha) of Yāvanapūrī is manly, commanding, childish, stubborn.) Much use of A flat (Dha komal) makes this rāga very expressive and tender.

feminine

SHRUTI-S expression

tonic

intensely sad

very tender and loving

feminine, wisdom, soberness

melancholy

tender and loving

peaceful and contented

suspense in the sadness,

warmth, activity

sorrowful

very tender and loving

helpless, sad, crying (used

from G (Pa) only)

ambition, desire

calm, peace

EXPRESSION: very tender, loving, and melancholy. Sadness mixed with passion and pleasure.

desire for love
and caresses

expectation
(sadness),
caressing

passionate
appeal

pleading
(A $\flat$ Dha k.)

OUTLINE

A musical staff with a treble clef. Three notes are placed on the staff: a whole note on the second line labeled 'Consonant', a half note on the first space labeled 'Sonant', and a whole note on the first line labeled 'Tonic'.

Scale

STHĀYI

Very tender and melancholy (J. 44)

A musical score for a piece titled "Very tender and melancholy (J. 44)". The score is written for a four-part vocal ensemble (Soprano, Alto, Tenor, Bass) and piano accompaniment. The key signature is B-flat major (two flats) and the time signature is 3/4. The tempo and mood are indicated as "Very tender and melancholy". The score consists of six staves. The first staff is the Soprano line, the second is the Alto line, the third is the Tenor line, and the fourth is the Bass line. The piano accompaniment is written on the bottom two staves. The music features a variety of dynamics, including piano (p), mezzo-forte (mf), and fortissimo (ff). There are also markings for "pp" (pianissimo) and "p" (piano). The score includes many slurs, ties, and other musical notations typical of a vocal score. The piece is identified as "J. 44".

ANTARĀ

BHŪPĀLA

I see Bhūpāla comfortably seated on a lion's throne, his huge family around him Young women, their eyes like those of deer, fan him with a whisk.

(Rāga sāgara 3 5)

GROUP Bhairavī

CLASS (*Jātī*) Audava
(pentatonic)

TUNING OF INSTRUMENT

Aroha Ascent

Avaroha Descent

SONANT (*Vādī*) A♭ (Dha k.)

CONSONANT (*Samvādī*) A♭ (Ga k.)

TIME OF PLAY day, first quarter (from sunrise)

MODE TYPE (*Thāla*) Bhairavī

SCALE TYPE Enharmonic (plagal)

CHARACTERISTICS no F (Ma) and no B (Ni) all the mobile notes are flat

EXPRESSION great sadness but borne with calm Sad tender and loving

No F (Ma) dejected
unsatisfied unreal

like a story told of
love rejected

Very sad and depressed (the dominant notes being A $\flat$ and E $\flat$ (Dha k-Ga k-). Every note expresses sadness but this sadness may come either from saturation, helplessness, or devotion. G(Pa) gives the strength to endure it.

SHRUTI-S: expression

tonic

very sad, despair

crying, melancholy, sadness
(No F(Ma): dejection, unsatisfied, unreal)
contentment, sympathy in pain, strength to bear great sadness

BILĀVAL

Velāvalī has the lustre of the blue lotus. Arranging jewels upon her body, she makes secret signs to her lover. How can she forget for one moment her chosen deity, the God of Love?

(Sangita darpana 2 59
Chatvārimśach'hata-rāga-nirūpanam,
Shiva tatva-ratnākara 6, 8, 81)

GROUP Bilāval

CLASS (*Jāti*) Audava-shādava
(Pentatonic in ascent and
hexatonic in descent)

TUNING OF INSTRUMENT

Āroha Ascent

Avaroha Descent

SONANT (*Vādi*) A(Dha)

CONSONANT (*Samvādī*) E(Ga)

TIME OF PLAY day, second quarter (from 9 to 12)

MODE TYPE (*Thāta*) Bilāval

SCALE TYPE Diatonic (but defective in ascent) in the lower tetrachord and chromatic (minor tone and minor third) in the upper tetrachord. This explains the sometimes very pathetic expression of this apparently major mode.

CHARACTERISTICS resembles the Western diatonic scale and was taken as basic scale for the first time in 'Nagmat e Asaphi' (1813) by Muhammad Reza. B(Ni) is used sparingly and only as a grace note to A (Dha).

EXPRESSION: active and tender, inquisitive, mixing joy and affection.
 D(Ri) and G(Pa) are clear and joyful. E (Ga) and A(Dha) are soft and gentle.
 F-(Ma-) is uncertain and grave, tender and affectionate

SHRUTI-S: expression

tonic

self assertive, forceful, brilliant

contented, calm, pleasing
 (no Ma in ascent takes away sadness. Thus joyful, careless)

loving, tender somewhat sad, doubt, attachment

active, brilliant

soft, calm, tender

soft, voluptuous

THEME (*Rāpā*):

LACH'HĀ BILĀVAL

GROUP: Bilāval

TUNING OF INSTRUMENT:

CLASS (*Jāti*): Shādava-sampūrṇa
(Hexatonic in ascent, hepta-
tonic in descent)

SONANT (*Vādi*): B (Ni)CONSONANT (*Samvādi*): E (Ga)

TIME OF PLAY: day, second quarter (9 to 12)

MODE TYPE (*Thāta*): Khammāja

SCALE TYPE: Diatonic

CHARACTERISTICS: Similar to Ālhaiyā Bilāval but with vādi B (Ni) and samvādi E (Ga).

EXPRESSION: Pleasant, joyful morning, deep and sincere, spiritual and contented, for songs of devotion, love and happiness.

The upper tetrachord resembles Kkammāja, the lower tetrachord resembles Bilāval.

E (Ga) with the sparingly-used D (Ri) gives the expression of prayer and shyness, soft and tender.

B♭ (Ni shuddha) is clear and joyful.

KAKUBHA BILĀVAL

“With a garland of champaka, her face like the moon, plump, showy, generous, adorned for love, Kakubha with her enticing glances is charming”

(Sangita-darpana 2 57,
Shiva tattva-raśnākara 6, 8, 78)

GROUP Bilāval

TUNING OF INSTRUMENT

CLASS (*Jāti*) Sampūrna (Heptatonic)

SONANT (*Vādi*) B (*Ni*)
(sometimes G (*Pa*))

CONSONANT (*Samvādi*) E (G,
(sometimes D (*Ri*))

TIME OF PLAY late morning towards midday (like Sāranga)

MODE TYPE (*Thāla*) Khammāja

SCALE TYPE Pythagorean diatonic (with ornamental diminished 7th)
(*Ni koma*)

CHARACTERISTICS Use of both B and B flat (*Ni koma*)

EXPRESSION Glory (sung at the time of coronation, etc) Very joyful

OUTLINE

pūrṇa (Hexatonic in
ascent, pentatonic in
descent)

Āroha Ascent

Avaroha Descent

SONANT (*Vādi*): E(Ga)

CONSONANT (*Samvādi*): B(Ni)

TIME OF PLAY: midday

MODE TYPE (*Thāta*): Kalyāṇa

SCALE TYPE: Diatonic

CHARACTERISTICS: similar to Bihāga (a midnight rāga). In all Sāranga-s, D, F and G (Ri Ma and Pa) are predominant, this is a characteristic of midday.

EXPRESSION: contentment, faith, very tender and loving prayer, more restful, lovely, peaceful and contented than other Sāranga-s.

The two F(2 Ma) (natural and sharp) represent midday (or midnight).

E₊ (Ga₊) denotes satisfaction, contentment, faith, E (Ga) relief, consolation.

SHRUTI-S expression

tonic

anxiety, weakness

self assurance, firmness

aspiration and prayer, calm, peace

contentment, joy

doubt, tenderness, aspiration, prayer

(passive) satisfaction, peace dependent

perturbed, anxious, uncertain

intensity, sincerity, impulse, intensifies
both activity and tenderness

bloom, fullness, activity

aspiration, prayer

brightness, confidence, prayer which
will be fulfilled

doubt, aspiration, softness

brightness, strength, sensuousness

Scale

A musical staff with a treble clef and a key signature of one flat (B-flat). The scale consists of 12 notes: B-flat, C, D, E-flat, F, G, A, B-flat, C, D, E-flat, and F. The notes are written in a single line, with a bar line after the eighth note (B-flat).

STHĀYĪ

Very slow and expressive (♩ = 44)

Very slow and expressive (♩=44)

ANTARĀ

The musical score for 'The Rose Tree' is written for two staves. The first staff begins with a treble clef, a key signature of one flat (B-flat), and a 3/4 time signature. The tempo is marked 'Allegretto' and the dynamics are 'mf' (mezzo-forte) and 'p' (piano). The melody features a triplet of eighth notes, followed by a quarter note, and then a series of eighth notes. The second staff begins with a bass clef and continues the melody. It includes a triplet of eighth notes, followed by a quarter note, and then a series of eighth notes. The piece concludes with a double bar line and the word 'Fine'.

STHĀYĪ

KHAMMĀJA

A lovely girl in the flower of youth, robed in yellow,
Kāmbhojīkā of the beautiful hair Searching everywhere in
the forest with her maids, the thought of her lover makes her
weep with tenderness

(*Shiva-tattva-ratnākara* 6, 8, 99)

Bearing arrows of flowers and adorned with the blue
lotus, moon-faced Kambhojā, her breasts like lily buds

(*Chatvāṛiṃshach'hata rāga nirūpanam* p 18)

In a sensuous mood, ever ready to sing, Kāmbhojī holds
wooden clappers near her left temple Her dancing feet seem to
write, restless, on the ground I ever think of her

ANTARĀ

The musical score for *ANTARĀ* is written on ten staves. The notation is complex, featuring many slurs, ties, and dynamic markings. The first staff begins with a treble clef and a key signature of one flat. The first staff has a *p* marking. The second staff has a *p* marking and a *pp* marking. The third staff has a *pp* marking and a *DC* marking. The fourth staff has a *p* marking and a *pp* marking. The fifth staff has a *p* marking and a *pp* marking. The sixth staff has a *p* marking and a *pp* marking. The seventh staff has a *p* marking and a *pp* marking. The eighth staff has a *p* marking and a *pp* marking. The ninth staff has a *p* marking and a *pp* marking. The tenth staff has a *pp* marking. The word "Variations" is written above the third staff. The word "ANTARĀ" is written above the first staff.

18. BIHĀGA

TUNING OF INSTRUMENT:

GROUP: Bihāga

CLASS (Jāti):

Audava-sampūrṇa

(pentatonic-heptatonic)

Āroha Ascent

Avaroha Descent

SONANT (Vādī): E(Ga)

CONSONANT (Samvādī): B(Ni)

TIME OF PLAY: Midnight (when everyone is asleep)

MODE TYPE (Thāta): Kalyāṇa

SCALE TYPE: mixed (the ascent is enharmonic, the descent diatonic)

CHARACTERISTICS: Both F (Ma) and F# (Ma ṭ), no D and A (Ri and Dha) in ascent

EXPRESSION. melancholy in the calm of night, thirst for enjoyment. (Gauda Sāraṅga which has a similar scale is more restful, lovely, and satisfied.)

contentment

sadness

crying

The combination of F natural (Ma shuddha) and F# (Ma tivra) always adds to the intensity of the expression whether it is sadness or joy. Here it shows more intense anguish and desire.

confident, loving

awake, lively

pence, moonlight

intense, acute

joyful, active

tender, appeal

acute, sensuous

THEME (Rūpā):

OUTLINE

STHĀYI

ANTARĀ

SOHINĪ

“Tall, virgin, charming, her eyes like lotuses, ears clustered with celestial flowers, Sohani’s is a lovely form She holds a lute, and her songs are amorous ”

(*Rāga-kalpa druma*, p 19)

GROUP Parāḥ

TUNING OF INSTRUMENT

CLASS (*Jāti*) Audava-shāḍava
(Pentatonic in ascent hepta-
tonic in descent)

SONANT (*Vādī*) A (Dha)

CONSONANT (*Samvādī*) E (Ga)

TIME OF PLAY end of the night (after Parāḥ before Kalingadā and Lalitā)

MODE TYPE (*Thāṭa*) Pūravi (without G (Pa))

SCALE TYPE Chromatic (special)

CHARACTERISTICS: No G (no Pa), but both F (Ma) and F $\sharp$ (MaT). F natural (Ma shuddha) is used only as an ornament from E (Ga).

Some musicians omit altogether the F natural (Ma shuddha). This F (Ma) is, however, essential to bring out the expression of late night, or early dawn.

This F natural (Ma shuddha) is necessary in Sohini although not in the similar scale of Vasanta because, in Vasanta, one starts from E (Ga) to return to E (Ga) without stopping on the A (Dha). while in Sohini one stops on A (Dha) in the ascent and, therefore, after F $\sharp$ (Ma tivra), a soft (natural) F (Ma) is necessary for the balance of the expression.

EXPRESSION: E (Ga) accentuated in the rāga-s of late night expresses the effort to remain awake. It represents the musician's self which remains conscious in the middle of the outward dream.

SHRUTI-S: expression

tonic

tender, plaintive

conscious, calm, effort to remain awake

moonlight, peace

intense, mysterious

soft, calm, prayer

acute, sensuous

THEME (*Rūpa*):

OUTLINE

STHĀYI

20. SHANKARĀ (At the end of the night)

GROUP. Independent

TUNING OF INSTRUMENT:

CLASS (*Jāti*). Shādava
(Hexatonic)

SONANT (*Vādi*): E (Ga)

CONSONANT (*Samvādi*). B (Ni)

TIME OF PLAY: third quarter of the night

MODE TYPE (*Thāta*) Bilāval

SCALE TYPE: Diatonic (defective) ; chromatic and enharmonic in descent.

CHARACTERISTICS: No F (no Ma)

EXPRESSION Long before dawn, manliness, full satisfaction, carelessness towards everything.
The dance of Shiva

SHRUTI S expression

tonic

confident joyful manly

calm, pleasing

joyful, active

soft, calm prayer

soft pleasure-loving

THEME (*Rūpa*)

OUTLINE

STHĀYĪ

With humour ($J=60$)

ANTARĀ

21 KALINGADĀ *before dawn*

GROUP Kalingadā

CLASS (*Jāli*) Shadava-Sampūrṇa
(Hexatonic-heptatonic)

TUNING OF INSTRUMENT

Āroha Ascent

Avaroha Descent

SONANT (*Vādī*) A_♭(Dha k)

CONSONANT (*Samvādī*) E(Ga)

TIME OF PLAY early morning, before dawn (before Lalita)

MODE TYPE (*Thāla*) Bhairava

SCALE TYPE Chromatic

CHARACTERISTICS E₊(Ga₊) is very much accentuated (Like all the late night rāgas (Vasanta, Sohini, Parā)) Kalingadā begins from the higher C (Sa)

E(Ga) is never flat (komal) in late night rāga-s

(Kalingadā the rāga of morning twilight, is considered a son of Dipaka, the rāga of evening twilight)

EXPRESSION E₊ (Ga₊) has a clear satisfied expression which seems however a disturbance, almost painful, to those who have sung all night and feel sleepy E₊ (Ga₊) has, therefore, two meanings sometimes it shows the musician in good mood and ready to play on, and sometimes troubled and remaining painfully awake

OUTLINE

STHĀYI

Tenderly (♩ 32)

ANTARĀ

CHAPTER VIII
SEASONAL RĀGA-S

22. SPRING RĀGA-S¹

Hindola

Vasanta

Panchama

¹ The rāga-s of spring have characteristics similar to the rāga-s of sunrise.

HINDOLA

Dwarf, with the sheen of a dove, on a swing pleasantly placed for play Hindola is gently rocked, the sages say, by women with ample hips

(*Rāga kalpa-druma* p 20, *Saṅgīta-darpana* 2, 58,
Chatvāriṃśach hata-rāgā-nirūpanam p 20 *Śhiva tattva*
ratnākara 6, 8, 79)

Her pale golden body with great hips is fragrant like the flowers of heaven Well favoured, long-eyed, she holds a lute

(*Rāga-kalpa-druma* p 20)

My heart dreams of Hindolā, whose breasts are firm, dressed in colourful garments

With the flowers of the Lotus she worships the Lord Krishnā who sits on a swing tied to the hanging roots of a banian tree She listens to the notes of the flute, her heart full of love, her fair limbs covered with jewels

(*Rāga sāgara* 3 61)

GROUP Spring rāga-s

CLASS (*Jāti*) Audava (pentatonic)

Aroha Ascent

Avaroha Descent

SONANT (*Vādi*) A₊ (Dha₊)

CONSONANT (*Samvādi*) E₊ (Ga₊)

TIME OF PLAY: in Spring time (otherwise, morning 2nd half (9 to 12))

MODE TYPE (*Thāta*): Kalyāna

SCALE TYPE: mixed chromatic and enharmonic

CHARACTERISTICS: no D(Ri) and no G(Pa).

More expressive if B (Ni) is also omitted.

EXPRESSION: spring, bursting life, like a war dance. (Hindola means 'swing'.)

No softness. Passionate, but not loving, Hindola is violent. All spring rāga-s have this same creative impulse yet Panchama is milder and Vasanta very soft and delicate.

*Virile,
rough,
challenging*

*B(Ni), when brought in
brings complexity and
uncertainty*

SHRUTI-S: expression

tonic

awake, lively, contented

intense, active (adds to ex-
pression)

contented, restless, playful

(acutè, sensuous)

THEME (*Rāpā*):

OUTLINE

STHĀYĪ

ANTARĀ

VASANTA

With ear-rings of mango flower and a high diadem spread wide like the fan of a peacock, her indigo body dark like the black bee, lovely, voluptuous, fortunate, is Vasantī the darling of Spring.

(*Rāga-kalpa-ḍrūma* p. 20 ; *Saṅgīta-darpana* 2, 71 ;
Shiva-tattva-ratnākara 6, 8, 105)

Parrots, Cuckoos and Shāri birds flutter about Vasanta, Lord of Spring, who dances in the garden of Love surrounded by lovely women. His image never leaves my heart.

(*Rāga-sāgara* 3, 17)

TUNING OF INSTRUMENT:

GROUP: Spring rāga-s

CLASS (*Jāti*): Audava-Shadava
(Pentatonic in ascent, hexatonic in descent)

Āroha Ascent

Avaroha Descent

SONANT (*Vādī*): C(Sa)

CONSONANT (*Samvādī*): F# (Ma t.)

TIME OF PLAY: Spring time

MODE TYPE (*Thāta*): Pūravī

SCALE TYPE: Chromatic

CHARACTERISTICS: no fifth (no Pa)

OUTLINE

STHĀYĪ

With delicacy and phantasy
 (J. 80)

ANTARĀ

PANCHAMA

"Golden, with blood-red scarf, his ruddy eyes wide open
and heavenly blossoms at his ears, this amorous youth,
victorious, dear to all, the very form of Love, talks charmingly
like the Kokila-bird at dawn"

(Sangita-darpana 2, 88)

GROUP Spring rāga-s

TUNING OF INSTRUMENT

CLASS (*Jāti*) Audava-shāḍava
(Pentatonic in ascent hexa
tonic in descent)

SONANT (*Vādi*) F# (MaT)

CONSONANT (*Samvādi*) C (Sa)

TIME OF PLAY night

MODE TYPE (*Thāta*) Māravā

SCALE TYPE Chromatic

CHARACTERISTICS No fifth note (no Pa) same scale as Vibhāsa D (Ri) is light (not accentuated)

EXPRESSION The sonant F# (MaT) seems bashful while the consonant is the elegant and manly young god of spring C (Sa) is strong and energetic E+ (Ga+) in Panchama is energetic, active, joyful (E (Ga) in Vasanta is slightly veiled soft and tender)

challenge

SHRUTI-S: expression

tonic

tender, peaceful

energetic, active, joyful

bashful, uncertain

calm, satisfied

acute, sensuous

THEME (*Rūpa*):

23. RĀGA-S OF THE RAINY SEASON¹

Mīyān Mallār

Desha Mallār

Gauda Mallār

Surat Mallār

Shuddha Mallār

Megha Mallār¹

•

¹ The scales of Mallār (mid-year) always resemble those of Sāranga (midday).

MĪYĀN MALLĀR

GROUP Mallār
(rainy season)

TUNING OF INSTRUMENTS

CLASS (*Jātī*) Audava-sampūrṇa
(Pentatonic in ascent and
heptatonic in descent)

SONANT (*Vādrī*) C (Sa)

CONSONANT (*Sampādrī*) F (Ma)

TIME OF PLAY rainy season

MODE TYPE (*Thāla*) Kāñī

SCALE TYPE Pythagorean diatonic (first plagal mode), with chromatic ascent

CHARACTERISTICS No E (Ga) in ascent Mīyān Mallār is a combination of Mallār and Jayajavanti, a Mallār played in Darbārī style

EXPRESSION (Shuddha Mallār and Megha Mallār combined) Monsoon rains, passionate and happy although more melancholy than Dhāñī which has a similar scale

D (Rī) comforts

SHRUTI-S: expression

tonic

comfort, strength

aspiration, tender, delicate, resembles
Bb (doubt on the result of appeal)
some melancholy

calm, pleasing

active, joyful

restless, playful

delicate, interrogative, aspiration
(soft but not sad)

(soft, pleasure-loving)

THEME (*Rūpa*):

DESHA MALLĀR

GROUP: (Mallār
(rainy season)

TUNING OF INSTRUMENT:

CLASS (*Jāti*): Audava-sampūrṇa
(Pentatonic in ascent and
heptatonic in descent)

SONANT (*Vādi*): D (Ri)

CONSONANT (*Samvādi*): G (Pa)

TIME OF PLAY: rainy season

MODE TYPE (*Thāta*): Kāfi with additional E and B natural (Ga and Nī
shuddha).

SCALE TYPE: Complete diatonic of 9 notes (with chromatic-enharmonic
ascent).

CHARACTERISTICS: It is the first mūrch'hanā (plagal mode) of the full diatonic
scale of 9 notes (with Kākali Nī and Antara Ga).

EXPRESSION: Monsoon, rains, passion, love, desire; the question of the love's
acceptance depends upon the presence of E (Ga).

OUTLINE

STHĀYĪ

ANTARĀ

GAUDA MALLĀR

GROUP Mallār
(rainy season)

TUNING OF INSTRUMENT

CLASS (*Jāti*) Sampūrṇa
(Heptatonic)

Āroha Ascent

Ataroha Descent

SONANT (*Vādī*) F (Ma) and also E (Ga)

CONSONANT (*Samvādī*) C (Sa)
and also A (Dha)

TIME OF PLAY rainy season

MODE TYPE (*Thāṭa*) mixed Yaman and Khammāja (this is but the plagal mode of F (Ma mūrṇ'hanā) in the diatonic of 9 notes (with Kākālī Nī and Antara Ga)

SCALE TYPE Diatonic

CHARACTERISTICS Uses both F (Ma) and F $\sharp$ (MaT) and both B natural (Nī shuddha) and B flat (NīK) and according to motives two distinct vādi-s and two samvādi-s these being sometimes F and C (Ma and Sa) and sometimes E and A (Ga and Dha)

F $\sharp$ (MaT) is very rare so is B $\flat$ (NīK) This rāga is often played without B $\flat$ (NīK) The F $\sharp$ (MaT) is just an ornament from G (Pa), it is, however, indispensable for the rāga while B $\flat$ (NīK) can be dispensed with

EXPRESSION Rains, beauty and charm, the end of the monsoon with alternance of rain (Mallār) and sunshine (Gauda-Sāranga)
Combination of diatonic harmonic based on the scale of C (Sa mūrṇ'hanā) and of diatonic Pythagorean based on the Ma mūrṇ'hanā (scale of F) Gauda Mallār receives by the subtle contrast of these two scales (residing in the difference of one comma occurring on E, A and B (Ga, Dha and Nī)), a peculiar versatility and charm

SHRUTI-S: expression

tonic

confident, joyful

calm, affectionate, quiet, faithful

forcible, demanding (resembles B+ (N1+))

calm, peace

intensity, brilliance

brilliant, glorious

interrogative, soft, calm

restless, playful

beauty, love

doubt

forcible, tense, demanding, intense, desire

THEME (*Rūpa*):

GROUP: Mallār (Rāga-s of the rainy season)

TUNING OF INSTRUMENT:

CLASS (*Jāti*): Shādava-sampūrṇa
(Hexatonic in ascent and pentatonic in descent)

SONANT (*Vādi*): A (Dha)

CONSONANT (*Samvādi*): D (Ri)

TIME OF PLAY: rainy season

MODE TYPE (*Thāta*): Khammāja

SCALE TYPE: Diatonic

CHARACTERISTICS: Resembles Desha Mallār, but has only B flat (NiK) and no B natural (Ni shuddha). E (Ga) should be very light, never should one stop on it.

EXPRESSION: Rains

F (Ma) always means satisfaction, peace

heavy emotion, search for enjoyment, call to the playmates.

SHRUTI-5 expression

tonic

powerful satisfied, contented,
self-confident

calm pleasing

peace, satisfaction

joy, activity
(enchances A (Dha))

very joyful

beautiful, loving tender

THEME (*Rāṇa*)

OUTLINE

STHĀYĪ

With peaceful contentment ($\text{♩} = 48$)

ANTARĀ

SHUDDHA MALLĀR

Pale and weak, her voice like the song of the kokila-bird,
 some cadence reminds her of her lord Claspings her lute,
 Mallārikā cries out in misery—heart-anguished with the pain
 of youth

(*Sangīta-darpana* 2, 77,
Shiva tattva-ratnākara 6, 8, 117)

I meditate upon Malahārī, who constantly worships Shiva,
 the Lord of Sleep Pure, She rests surrounded with the lotuses
 of the cool season below the divine tree of ages Her pure, pale
 body has the glow of the winter clouds

(*Rāga sāgara* 3, 7)

GROUP Mallār (Rainy season)

TUNING OF INSTRUMENT

CLASS (*Jatī*) Audava
 (pentatonic)

Āroha Ascent

Avaroha Descent

SONANT (*Vadī*) Sa (C)

CONSONANT (*Samvādī*) Ma (F)

TIME OF PLAY Rainy season

MODE TYPE (*Thāla*) Bilāval

SCALE TYPE Chromatic

CHARACTERISTICS: no Ga (E) no Ni (B)

EXPRESSION: rains, monsoon. Manly. It is the less delicate of Mallār-s. It has no flattened notes, hence no tenderness or melancholy. All the notes give a feeling of determination, even A(Dha) which is soft but without hesitation.

*Expression of rains
in all Mallār-s*

Lightning

ANTARĀ

MEGHA MALLĀR

The ancients tell of Megha rāga, lustrous like a blue lotus, the divine smile of his moon-like face is sweeter than ambrosia. Clothed in yellow in the midst of heavy clouds, he shines among the heroes. The thirsty Chātaka-birds that drink only raindrops, at the sight of him cry out for water.

(Sangīta-darpana 2, 76 ;
Shiva-tattva-ratnākara 6, 8, 119)

Ever should Megha ranjinī be praised who brings flower garlands for the worship of Indra god of rains. Her body looks like lightning ; a blue veil enhances her beautiful hips.

(Rāga-sāgara 3, 3)

TUNING OF INSTRUMENT:

GROUP: (Rāga-s of the rainy season)

CLASS (*Jāti*): Audava-shādava
(Pentatonic-hexatonic)

Āroha Ascent

Avaroha Descent

SONANT (*Vādī*): Sa (C)

CONSONANT (*Samvādī*): Ma (F)

TIME OF PLAY: at night, or at all times during the rainy season

MODE TYPE (*Thāta*): Khammāja

SCALE TYPE: Chromatic

CHARACTERISTICS no A(Dha); E(Ga) only used as ornament of F(Ma).
Portamento (Mīda) between R₁ and Pa (D and G).

EXPRESSION monsoon, rains commanding, deep happy

Rains
(pleasing,
calming)

deep,
commanding,
happy

expectation

satisfaction

sharp, like
the throwing
of an arrow

SHRUTI-S expression

tonic

bull-like force, self con-
fident, enterprising

lively, pleasing

calm, peace

joyful, active

beautiful, loving

desire, expectation

Trivandrum Sanskrit Series, 1925
- Sangita Chūdāmaṇi (of Jagadekamalla 1138 1150)
Baroda, 1958
- Bhāva-prakāśha (of Shāradātanaya, twelfth century) (ch 7)
Baroda, 1930
- Sangita ratnākara
(of Shārngadeva, thirteenth century)
Anandāshrama Poona, 1897 and Adyar Library, 1943
(Commentary of Kallinātha, fifteenth century)
(Commentary of Simhabhūpāla fourteenth century) Adyar ed only
- Sangitopanishad-saroddhara (of Sudhākālāsha 1350)
Baroda
- Bṛhaddharma Purāṇa (ch 44)
Calcutta ed

FOURTH PERIOD

- Abhinava tāla manjarī
(of Appā Tulsī modern)
Bombay, c. 1920
- Abhinava-rāga-mānjari
(of Vishnu Sharmā (Pt Bhātkhande) modern)
Bombay, 1921
- Anūpa sangita-ankuśha
(of Bhāva Bhatta, seventeenth century)
Bombay, c. 1916
- Anūpa-sangita ratnākara
(of Bhāva Bhatta, seventeenth century)
Bombay, c. 1916
- Anūpa-sangita vilāsa
(of Bhāva Bhatta, seventeenth century)
Bombay, 1921
- Ashtottara shata-tāla lakṣhanam
Bombay, early twentieth century
- Bāhattara-melakartā
(of Venkata Makhun c. 1620)
Adyar, 1938
- Chaturdandī prakāśhikā
(of Venkata Makhun, c. 1620)
Madras, 1934
- Hṛdaya kautuka
(of Hṛdaya Nārāyana, c. 1667)
Bombay, c. 1920

- Hridaya-prakāsha
(of Hridaya Nārāyaṇa, c. 1667).
Bombay, c. 1920.
- Nartana-nirnaya
(of Pundarīka Vitthala, sixteenth century).
Bombay, early twentieth century.
- Nṛityādhyaya
(of Ashokamalla, c. 15th century).
Baroda, 1963.
- Rāga-chandrikā
(of Appā Tulsi, modern).
Bombay, 1911.
- Rāga-kalpa-druma
(of Krishnānanda Vyāsa).
In Bengali and Hindi scripts, Calcutta, 1842.
- Rāga-kalpa-drumāṅkura
(of Appā Tulsi, modern).
Bombay, 1914.
- Rāga-lakṣhanam
(of Venkata Makhin, c. 1620).
Madras, early twentieth century.
- Rāga-mālā
(of Pundarīka Vitthala, sixteenth century).
Bombay, c. 1916 (Mss. Poona).
- Rāga-manjarī
(of Pundarīka Vitthala, sixteenth century).
Bombay, c. 1916.
- Rāga-tattva-vibodha
(of Shri Nivāsa, late seventeenth century).
Bombay, c. 1916 and Gaekwad's Oriental Series, 1956.
- Rāga-vibodha
(of Somanatha, 1610).
Lahore, 1910; Madras 1945.
- Rasa-kaumudī
(of Shri Kantha, eighteenth or nineteenth century). Gaekwad's Oriental Series, 1963.
- Sāhitya-sangīta-nirūpanam
(same work as Sangīta-mālā, Mss. dated 1778).
Delhi, 1817.
- Samgraha-chūdāmaṇi
(of Govinda).
Adyar, 1938.
- Sangīta-āditya.
Baroda, early twentieth century.
- Sangīta-darpana
(of Dāmodara Mishra, 1625).
Calcutta, 1880.
Sang. Darp. (abbreviation).
- Sangīta Dāmodara
(of Subhankara, c. 15th century).
Calcutta, 1960.

- Sangita-gangā-dharana
(of Nangarāja)
Belgaum, 1936
- Sangita kṛtayah
(of Rāma Varmā Mahārāja)
Trivandrum 1932
- Sangita pāñjāta
(of Ahobala, *thirteenth or seventeenth century*)
Calcutta, 1884
- Sangita rājī
(of Kumbhakarna 15th century) Vol 1
Benares University, 1963
- Sangita-sampradāya-pradarśini
(a compilation from Venkata Makṣin)
Ettayapuram early twentieth century
- Sangita-sārāmṛtam
(of King Tulajendra Bhonsale of Tanjore, (1729-35))
Madras Music Acad , 1942
- Sangita (sāra) sangraha
(of Ghanashyāma Naraharidāsa)
edited with notes by Swami Prajnānanā-nanda Calcutta
- Sangita sāra-sangraha
(of Sourindro Mohan Tagore)
Calcutta 1875
- Sangita sudhā
(of King Raghunātha of Tanjore 1614)
Madras Music Acad , 1940
- Sangita-sudhākara
(of Appā Tulsī, modern)
Bombay, 1917
- Shadrāga-chandrodaya
(of Pundanka Viṭṭhala sixteenth century)
Bombay, early twentieth century (Mss Poona)
- Shiva tattva ratnākara
(an encyclopedia of Bāsava Rājā, 1798-1815)
Madras 1927 Sh tat Ratn (abbreviation)
- Shrimallakshya sangitam
(a compilation from older texts)
By Vishnu Sharmā (Pt Bhātkhande)
Bombay, 1910
- Svaramela kalānidhu
(of Rāmānātha 1550)
Annamalai University 1932
Svar Kal (abbreviation)
- Vinā Lakshana
(of Parameshvara, 15th-18th century)
Baroda, 1959
- Vinā Prapāthaka
(17th cent)
Baroda 1959

II. SANSKRIT WORKS, UNPUBLISHED

From the following libraries:

Adyar Library
 Central Library, Baroda
 Maharajah of Benares
 Maharajah of Bikaner
 Royal Asiatic Society, Calcutta
 Government Sanskrit College, Calcutta
 Maharajah of Kashmir
 India Office Library, London
 Govt. Oriental Library, Madras
 Govt. Oriental Library, Mysore
 The Bodleian Library, Oxford
 Palace Library, Tanjore
 Palace Library, Trivandrum
 Bhandarkar Oriental Institute, Poona,
 etc.*

Copies of most of these works are available in the author's personal library at the International Institute for Comparative Music Studies in Berlin.

* A few known works often considered lost but which Mr. O. C. Gangoly (in *Rāgas and Rāginīs*, London, Bombay, 1948) say he has consulted are mentioned here with due reference.

Abhilashitārtha-chintāmani

(of King Someshvara, 1131), an encyclopedia with a large section on music.

(Mysore, Baroda).

Abhinava-bharata-sāra

(Mysore).

Abhinava-bhārati

(of Abhinava Gupta)

(Madras, Trivandrum).

Same work as Nāṭya Veda-vivṛitti.

Ādi-bharata

(Mysore, Tanjore).

Telugu script. Incomplete.

Ānanda-(san)jivana or Ānanda-sanjīvani Sangīta

(of Madanapala, 1528).

(Bikaner, Calcutta).

Angahāra-lakshana

(Trivandrum).

Arjunādimata-sāra

(of Shuddha Sattva Venkatāchārya).

(Madras). Incomplete.

Arjuna-bharata

(of Arjuna).

(Tanjore). Incomplete.

Aumapatam-gīta-shāstram

(later than ninth century).

(Madras). Incomplete.

- Bālarāma bharata
(ol Bālarāma Kulashekhara Varmā, 1798-1810)
(Madras, Trivandrum)
- Bharata-arnava
(of Nandikeshvara)
(Madras, Tanjore)
Same work as Nandi-bharata
- Bharata arnava-sangraha
(Grantha script)
(Tanjore)
- Bharata-artha-chandrikā
(of Nandikeshvara) with Telugu comm
(Madras)
- Bharata bhāshya or sangīta-sarasvatī hṛdayālamkāra
(of Nānya Deva twelfth century)
(Poona)
- Bharata gāna shāstra
(Calcutta)
- Bharata lakshanam
(Tanjore)
A late compilation
- Bharata nāma-dīpaka Nada shāstram
(Nepal)
- Bharata-sarvārtha grantha
(of Mudumbai Narasimhachariar)
(Madras)
- Bharata-sāra
(Mysore)
- Bharata Shāstra
(anon) (India Office)
- Bharata Shāstra
(of Raghunātha)
(Tanjore)
- Bharata Shāstra
(ol Tulajādhīpa)
(Tanjore) A late compilation
- Bharata Shāstra-grantha
(of Lakshmidhara sixteenth century)
(Poona)
- Dattila-Kohaliyam
(Tanjore)
- Dakṣiṇī Rāga-mālā
(Poona) See Rāga mālā
